6. Troubleshooting

Problem	Solution
Camera does not turn on.	Ensure the battery is fully charged and correctly inserted. Try reinserting the battery.
Cannot take pictures.	Check if a memory card is inserted and has sufficient free space. Ensure the lens cap is removed (if applicable) and the camera is not in playback mode.
Images are blurry.	Ensure the lens is clean. Hold the camera steady or use the optical image stabilization. Check lighting conditions; use flash if necessary.
Flash does not fire.	Check the flash mode setting. Ensure it is not set to "Flash Off". The flash may not fire in very bright conditions or certain scene modes.
Battery drains quickly.	Reduce LCD brightness. Turn off the camera when not in use. Avoid excessive use of flash or continuous shooting. Battery performance can decrease in cold environments.
