4. Maintenance and Storage

Proper maintenance and storage can extend the life and ensure the reliability of your Duracell Coppertop AA batteries:

- **Storage:** Store batteries in their original packaging until ready for use. Duracell Coppertop AA batteries are guaranteed for 12 years in storage under normal conditions.
- **Temperature:** Store batteries at room temperature in a dry place. Avoid extreme temperatures, both hot and cold, as these can reduce battery performance and lifespan.
- **Handling:** Do not disassemble, crush, or puncture batteries. Keep batteries away from fire or excessive heat.
- **Disposal:** Dispose of used batteries according to local regulations. Many communities have recycling programs for alkaline batteries. Do not dispose of batteries in household trash.

5. Troubleshooting

If your device is not functioning correctly after installing new Duracell Coppertop AA batteries, consider the following:

- **Check Polarity:** Ensure that the batteries are inserted with the correct positive (+) and negative (-) alignment as indicated in the device's battery compartment.
- **Replace All Batteries:** If the device uses multiple batteries, replace all of them simultaneously with new ones. Mixing old and new batteries can lead to reduced performance or leakage.
- **Device Compatibility:** Verify that your device is designed to use AA-sized alkaline batteries. Refer to your device's user manual for specific battery requirements.
- **Battery Contacts:** Ensure that the battery contacts in the device are clean and free of corrosion. Gently clean them with a cotton swab if necessary.
- **Device Malfunction:** If the issue persists, the problem may lie with the device itself rather than the batteries.

Warning: Batteries may explode or leak, and cause burn injury, if recharged, disposed of in fire, mixed with a different battery type, inserted backwards or disassembled. Do not remove the battery label.
