What is the difference between [Ultimate Wired Controller Designed for Xbox] and [Pro 2 Wired Controller Designed for Xbox]?

The functions between them are almost the same. But for the custom profiles, [Ultimate Wired Controller Designed for Xbox] can save 3 profiles whereas [Pro 2 Wired Controller Designed for Xbox] can only save 1 profile. The biggest difference is the layout of the controllers of which you can choose one for your preference.

What devices and platforms does the controller work with to play games?

It works with Xbox One / Xbox Series S / Xbox Series X consoles & PC for Window 10/11.

How long is the cable of Ultimate Wired Controller Designed for Xbox? What is the function of the outer ring on the cable at the front?

The cable is 3 meters, which can meet most of the requirements. The front head part is a breaker, which is used to prevent the console from falling down accidentally when dragging.
ATTENTION!!! The breaker cannot make sure to prevent the console from falling effectively every time, it should also keep the controller close enough to the console even the breaker is on the cable, so as not to cause cable

tension.

What kinds of earphones/headsets is the Ultimate Wired Controller Designed for Xbox compatible with? Is it compatible with the Xbox/headsets?

Make sure your earphones/headsets has a 3.5mm jack (4-segment, downward compatible with 3-segment). The 4-segment jack has the microphone function and adopted with international standard CTIA. The microphone and your earphones/headsets won't work if it's a jack with a 4-segment international standard OMTP. The 3-segment jack is compatible with general stereo earphones/headsets without microphone function. Please confirm the specifications of your earphones/headsets with the manufacturer before using. This controller is compatible with the Xbox headsets.

How do I control the volume of the microphone and earphones/headsets?

Press & hold profile button + D-pad(↑↓) to adjust the volume in games.
Press & hold profile button + D-pad(← →)to adjust the balance between voice and game volume.

In the process, the controller vibrates when the volume is 50%(Default) and you can hear the beep sound when you adjust the volume to maximum or minimum.
