8BitDo Lite2 Bluetooth Gamepad

INSTRUCTION

Switch

- please ensure your Switch system and Lite SE are updated to the latest version
- NFC scanning, IR camera, HD rumble, and notification LED are not supported, nor can the system be wakened up wirelessly
- status LED can indicate up to 8 players

connection

Bluetooth connection

- turn the mode switch to S
- press home to turn on the controller, and the LED starts to rotate from left to right
- press the pair button for 3 seconds to enter its pairing mode. LED stops blinking for a short moment then starts to rotate again. (This is required for the very first time only)
- go to your Switch Home page to click on “Controllers”, then click on “Change grip/order” and wait for the connection
- LED becomes solid and the controller vibrates when the connection is successful

wired connection

- go to System Setting > Controller and Sensors > Turn on Pro Controller Wired Communication
 - turn the mode switch to S
 - connect the controller to your Switch dock via a USB cable
 - wait till the controller is successfully recognized by your Switch to play

Android

- please ensure your Android and Lite 2 are updated to the latest version

Bluetooth connection

- turn the mode switch to D
- press home to turn on the controller, LED 1 starts to blink
- press pair button for 3 seconds to enter its pairing mode. LED stops blinking for a short moment then starts to rotate again. (This is required for the very first time only) go to your Android device's Bluetooth setting, and pair with [8BitDo Lite 2]
- LED becomes solid and the controller vibrates when a connection is successful

Wired Connection

- OTG support is required on your Android device. Please get in touch with your device manufacturer for more details
 - turn the mode switch to D
 - connect the controller to your Android device via a USB cable
 - wait till the controller is successfully recognized by your Android device to play

Turbo function

- hold the button you would like to set turbo to, then press the star button to activate/deactivate the function
- D-Pad, Left stick, Right stick, Home, Select, and Start buttons are not included
- turbo function is not available on Switch mode

battery

status —LED indicator

low battery: red LED blinks

charging: red LED stays solid

fully charged: red LED turns off

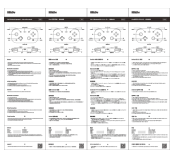

- About 20 hours of playtime with a 480mAh built-in battery pack, rechargeable with 1 hour charging time
- The controller will turn off for 1 minute with no connection and 15 minutes with a Bluetooth connection but no use controller stays on with the wired connection
