Clear Device Password

1.1 Networking Requirements

1. If the administrator forgets the login password and cannot enter the configuration mode for configuration, then you need to use the Consloe line to enter the CTRL layer for password recovery.
2. To do password recovery, you need to prepare the configuration line (console line). During the password recovery process, you need to restart the device to complete the operation at the CTRL layer.
3. During the password recovery process, pay attention to rename the file, do not choose to delete the file, otherwise the configuration will be lost.

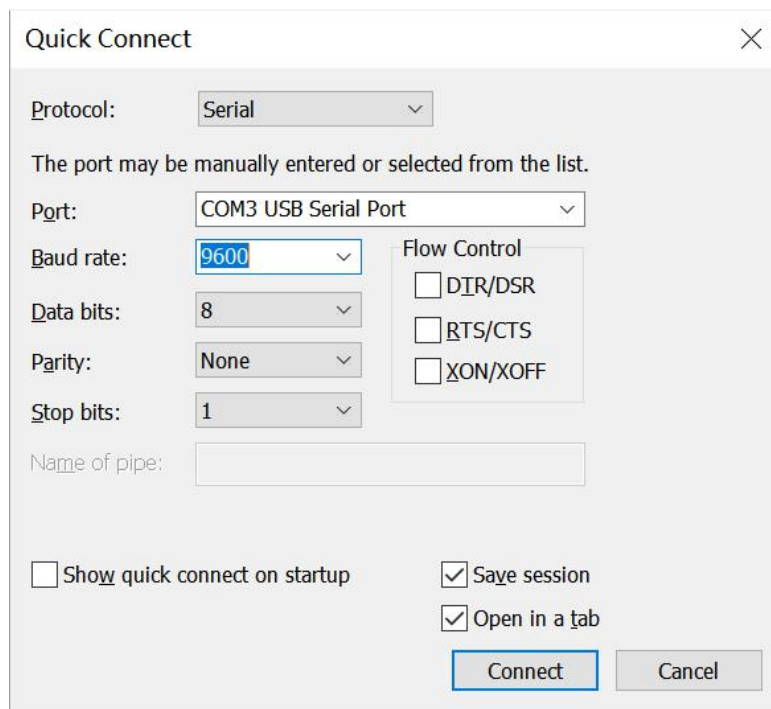

1.2 Network Topology

1.3 Configuration Steps

1.3.1 U-boot Save Configuration and Reset Password

Log in to the CLI interface of the switch, connect the console port of the switch with a console cable, open the hyper terminal CRT, and set related parameters.

Manually power off and restart the device. When prompted by Ctrl+C, press the Ctrl key C key on the keyboard at the same time to enter the u-boot interface. Under the Rboot menu, click the red reminder below to enter the address configuration menu

U-Boot 1.4.2-gf4b0786 (Nov 01 2018 – 09:52:06 +0800)

I2C: ready

DRAM: 1 GiB

NAND: 1024 MiB

Loading Environment from SPI Flash... SF: Detected s25fl128s_64k with page size 256 Bytes, erase size 64 KiB, total 16 MiB OK

Press Ctrl+B to enter Boot Menu, Press Ctrl+C to enter Rboot 0

===== Rboot Menu(Ctrl+Z to upper level) =====

Scattered utilities.

1. Tftp utilities.

2. X/Y/ZModem utilities.
3. Run main.
4. SetMac utilities.
5. Scattered utilities.

Press a key to run the command: 4

===== Rboot Menu(Ctrl+Z to upper level) =====

Scattered utilities.

0. Show Version.

1. Reload System.
2. Set Baudrate.
3. Format Flash.
4. Exit menu.

Press a key to run the command: 4

data # cd /mnt/data ——>Enter the data directory

data #vi config.text ——>Enter the config.text file

Use the up, down, left and right keys of the keyboard to move the cursor, find the corresponding password configuration, press dd twice in succession, delete the entire line of commands, and finally press esc, enter: wq, exit the save file, and then just reboot. If you delete the wrong configuration, press esc, enter: q! to force quit the document, and then enter the document with vi config.text.

1.3.2 U-boot Restore Factory Settings Reset Password

Manually power off and restart the device. When the Ctrl+C prompt appears, press the Ctrl key C key on the keyboard at the same time to enter the u-boot interface. Under the Rboot menu, click the red reminder below to enter the address configuration menu

U-Boot 1.4.2-gf4b0786 (Nov 01 2018 – 09:52:06 +0800)

I2C: ready

DRAM: 1 GiB

NAND: 1024 MiB

Loading Environment from SPI Flash... SF: Detected s25fl128s_64k with page size 256 Bytes, erase size 64 KiB, total 16 MiB OK

Press Ctrl+B to enter Boot Menu, Press Ctrl+C to enter Rboot 0

===== Rboot Menu(Ctrl+Z to upper level) =====

Scattered utilities.

1. Tftp utilities.
2. X/Y/ZModem utilities.
3. Run main.
4. SetMac utilities.

Scattered utilities.

0. Show Version.

1. Reload System.

2. Set Baudrate.

3. Format Flash.

4. Exit menu.

Press a key to run the command: 4

Enter the data directory

~ # cd /mnt/data/

Rename the config.text file to config.text.bak

/mnt/data # mv config.text config.text.bak

/mnt/data # sync

/mnt/data # reboot

The system is going down NOW!

Sent SIGTERM to allTerminated

sh: can't set tty process group (Inappropriate ioctl for device)

[1]+ Terminated reboot

Sent SIGKILL to all processes

Requesting system reboot

[1847.933991] reboot: Restarting system

Reset

2.1 Networking Requirements

1. After restoring the factory settings, the original configuration will be cleared. If the configuration is more important, please backup the configuration to the local computer first.
2. After restoring factory settings, the default ip is 192.168.1.200, web interface user name and password admin/admin
3. The console cable and RJ45 network cable of the switch need to be prepared.

2.2 Network Topology

2.3 Configuration Steps

2.3.1 Factory Reset via CLI Interface

Log in to the CLI interface of the switch, connect the console port of the switch with a console cable, open the hyper terminal CRT, and set related parameters.

Quick Connect

Protocol:

Serial

The port may be manually entered or selected from the list.

Port:

COM3 USB Serial Port

Baud rate:

9600

Data bits:

8

Parity:

None

Stop bits:

1

Flow Control

☐ DTR/DSR

☐ RTS/CTS

☐ XON/XOFF

Name of pipe:

☐ Show quick connect on startup

☒ Save session

☒ Open in a tab

Connect

Cancel

Enter the set user name and password, execute dir to view the file.

Switch>enable

Switch#dir

```
