Maintenance

1. Cleaning

To maintain the appearance and functionality of your TR-08, regularly wipe the unit with a soft, dry cloth. Avoid using abrasive cleaners, solvents, or waxes, as these can damage the finish and internal components.

2. Battery Replacement

If using battery power, replace the AA batteries when the unit's performance degrades or the low battery indicator

appears. Always replace both batteries simultaneously with new ones of the same type. Remove batteries if the unit will not be used for an extended period to prevent leakage.

3. Firmware Updates

Periodically check the official Roland website for firmware updates. Firmware updates can improve performance, add new features, or resolve known issues. Follow the instructions provided by Roland carefully when performing any firmware update.

Troubleshooting

Problem	Possible Cause	Solution
No power	Batteries depleted or incorrectly inserted; USB cable disconnected or faulty.	Replace batteries, ensuring correct polarity. Check USB cable connection and power source.
No sound output	Volume too low; incorrect audio connections; instrument levels set to zero.	Increase master volume and individual instrument levels. Verify audio cable connections.
MIDI sync issues	Incorrect MIDI settings (clock source, channel); faulty MIDI cable.	Check MIDI settings on both TR-08 and external device. Try a different MIDI cable.
