Maintenance

To ensure the longevity and smooth operation of your UGears Bike VM-02, regular maintenance is recommended.

Since the model is made of wood, environmental factors can affect its performance.

- **Sanding:** If any parts fit too tightly during assembly or operation, gently sand the edges using the included sandpaper or fine-grit sandpaper. This will help reduce friction and allow for smoother movement.
- **Waxing:** Apply a small amount of paraffin wax (such as from a candle) to moving gears, axles, and connecting points. This lubrication is crucial for reducing friction and ensuring the mechanical components operate freely. Pay particular attention to areas where wood rubs against wood.
- **Cleaning:** Use a soft, dry cloth to gently wipe dust from the model. Avoid using water or chemical cleaners, as these can damage the wood.
- **Storage:** Store the model in a dry environment away from direct sunlight and extreme temperature fluctuations to prevent warping or damage to the wood.

Troubleshooting

If you encounter issues with your UGears Bike VM-02, consider the following common troubleshooting steps:

- **Model Not Moving or Moving Slowly:**
  - Ensure the rubber band motor is correctly installed and sufficiently wound.
  - Check for any parts that are too tight or rubbing against each other. Apply wax to all moving gears and connections as described in the Maintenance section.
  - Verify that all gears are properly aligned and engaged.
- **Parts Not Fitting Together:**
  - Some parts may require gentle force to snap into place. If a part is excessively tight, carefully sand the edges.
  - Double-check the instruction manual to ensure you are using the correct part and orienting it correctly.
- **Broken Parts:**
  - While the plywood is durable, excessive force can cause breakage. If a small piece breaks, wood glue can be used for repair, though it is generally not required for assembly.
  - For significant breakage or missing parts, contact UGears customer support.
