Setup and Assembly

The UGEARS Wheel-Organizer is a self-assembly model. Follow the step-by-step instructions provided in the packaging. The estimated assembly time is 1-3 hours.

Before You Begin:

- **Unpack Carefully:** Remove all wooden sheets and components from the packaging.
- **Identify Parts:** Familiarize yourself with the different pieces. Refer to the parts diagram in your included instruction booklet.
- **Preparation:** Ensure you have a clean, flat, and well-lit workspace.
- **No Glue Required:** This model is designed for snap-together assembly. Do not use glue unless specifically instructed for repair.
- **Waxing Gears:** Some gears may benefit from a light application of wax (not included) to ensure smoother operation. Refer to the detailed assembly guide for specific steps where waxing is recommended.

Assembly Steps:

1. **Punch Out Pieces:** Gently press out each piece from the wooden sheets. Use a small tool or your fingers to carefully detach them. Avoid forcing pieces to prevent breakage.
2. **Smooth Edges:** If any edges are rough, gently smooth them with fine-grit sandpaper (not included) or the provided wax stick.
3. **Follow Numbered Steps:** Assemble the model by following the numbered steps in the accompanying instruction booklet. Pay close attention to the orientation of each piece.
4. **Interlocking Mechanism:** Pieces are designed to interlock. Apply gentle, even pressure to connect them. If a piece does not fit easily, do not force it. Re-check the instructions and the piece orientation.
5. **Test Moving Parts:** As you assemble sections with moving parts, periodically test their movement to ensure they are not too tight or jammed.

Maintenance

Proper care will ensure the longevity and smooth operation of your UGEARS Wheel-Organizer.

- **Dusting:** Regularly dust the model with a soft, dry cloth or a soft brush to prevent dust accumulation in the gears.
- **Avoid Moisture:** Keep the wooden model away from water, high humidity, and direct sunlight to prevent warping or damage to the wood.
- **Lubrication:** If the mechanism becomes stiff over time, a small amount of wax (paraffin or beeswax) can be applied to the gear teeth and moving axles. Avoid oil-based lubricants as they can damage the wood.
- **Storage:** Store the model in a dry, stable environment when not in use.

Troubleshooting

If you encounter issues with your Wheel-Organizer, refer to the following common solutions:

- **Pieces Not Fitting:**
  - Ensure you are using the correct piece for the step.
  - Check the orientation of the piece against the instructions.
  - Gently smooth any rough edges with fine-grit sandpaper.
  - Do not force pieces, as this can cause breakage.
- **Mechanism is Stiff or Not Turning Smoothly:**
  - Verify that all gears and moving parts are correctly aligned and not obstructed by loose pieces or debris.

- Apply a small amount of wax (paraffin or beeswax) to the gear teeth and axles where friction occurs.
- Ensure no pieces are too tightly pressed together, causing binding. Disassemble and reassemble the affected section if necessary, paying close attention to gentle pressure.

- **Pieces Break During Assembly:**
  - Wooden pieces can be delicate. Always apply gentle, even pressure.
  - If a piece breaks, it may be possible to repair it using wood glue. Apply a small amount of glue, hold the pieces together until dry, and ensure the repair does not impede movement if it's a functional part.
  - Contact UGEARS customer support if critical pieces are broken and cannot be repaired.
