4. Setup Guide

Follow these steps for the initial setup of your WAVLINK router.

4.1. Hardware Connection

1. **Position the Router:** Place the router in a central location in your home or office, away from obstructions and devices that may cause interference (e.g., cordless phones, microwaves).
2. **Connect to Modem:** Connect one end of the provided RJ45 Ethernet cable to the WAN port on your WAVLINK router and the other end to the LAN port on your modem or existing internet gateway.

3. **Power On:** Connect the power adapter to the DC 5V port on the router and plug the other end into a power outlet. Press the ON/OFF switch to power on the router. Wait for the PWR and WAN LEDs to become stable.

4.2. Initial Configuration

1. **Connect to Router's Wi-Fi:** On your computer or mobile device, search for the router's default Wi-Fi network name (SSID), usually found on a label on the router. Connect to this network.
2. **Access Web Interface:** Open a web browser and enter the default IP address (e.g., 192.168.10.1) or domain name (e.g., wavlink.com) provided in the router's documentation.
3. **Login:** Enter the default username and password (usually 'admin' for both, or as specified on the router label).
4. **Run Setup Wizard:** Follow the on-screen setup wizard to configure your internet connection type (Dynamic IP, Static IP, PPPoE), set up your new Wi-Fi network name (SSID) and password for both 2.4GHz and 5GHz bands.
5. **Save Settings:** Apply the settings and wait for the router to reboot.

5. Operating Modes and Features

5.1. Tri-Band Wi-Fi

The WAVLINK AC3000Mbps router operates on three distinct Wi-Fi bands: one 2.4GHz band and two 5GHz bands. This tri-band technology allows for more devices to connect simultaneously without compromising speed, reducing data transfer loss and ensuring a smooth experience for gaming, streaming, and other high-bandwidth activities.

Figure 5.1: Speed distribution across the tri-bands: 5GHz at 1733Mbps, 5GHz at 867Mbps, and 2.4GHz at 300Mbps.

5.2. USB Sharing

The integrated USB 3.0 port allows you to connect a USB storage device (e.g., flash drive, external hard drive) and share its content (files, media) with all connected devices on your network. USB 3.0 offers significantly faster data transmission compared to USB 2.0.

Figure 5.2: The USB 3.0 port on the router, enabling fast data sharing.

5.3. Guest Network

Provide secure Wi-Fi access for your guests without compromising your main network's security. You can create a separate guest network and share the Wi-Fi password via text message or email. The router supports up to 50 guest connections while keeping your private network files secure.

5.4. Parental Controls & QoS (Quality of Service)

Manage internet access for specific devices or users. You can pause internet access for family time or give children a break. The Quality of Service (QoS) feature allows you to prioritize bandwidth for devices that need it most, ensuring critical applications receive sufficient speed.

5.5. Touchlink Technology

The patented Touchlink technology simplifies guest Wi-Fi access. When a friend needs to connect, simply touch the top of the router. This will enable an open guest network for a configurable period (default 120 seconds), allowing them to connect without needing to know your password.

Figure 5.3: Illustrates the Touchlink feature for one-touch Wi-Fi connection.

6. Smart App Control

Monitor and manage your network conveniently from your mobile device using the intuitive WAVLINK smart router app, available for Android and iOS. The app provides comprehensive control over your network, including:

- Viewing connected devices at any time.
- Managing guest network settings.
- Implementing parental controls.
- Setting bandwidth prioritization (QoS).
- Checking upload and download speeds.

7. Maintenance

To ensure optimal performance and longevity of your WAVLINK router, consider the following maintenance tips:

- **Firmware Updates:** Regularly check for and install the latest firmware updates from the WAVLINK official website. Firmware updates often include performance improvements, security patches, and new features.
- **Optimal Placement:** Ensure the router is placed in an open, central location, ideally elevated, to maximize Wi-Fi

coverage and minimize signal interference. Avoid placing it near large metal objects, concrete walls, or other electronic devices.

- **Regular Reboot:** Periodically reboot your router (e.g., once a month) by unplugging it from the power outlet for 10-15 seconds and then plugging it back in. This can help clear its memory and resolve minor performance issues.
- **Cleanliness:** Keep the router clean and free from dust accumulation, especially around ventilation areas, to prevent overheating.

8. Troubleshooting

If you encounter issues with your router, refer to the table below for common problems and their solutions.

Problem	Solution
No Internet Access	Check if the WAN LED is lit. Ensure the Ethernet cable from your modem is securely connected to the router's WAN port. Reboot both your modem and router. Contact your ISP if the issue persists.
Slow Wi-Fi Speed	Ensure your devices are connected to the appropriate band (5GHz for faster speeds, 2.4GHz for wider coverage). Reduce interference by repositioning the router. Use the Turbo button to clear cache. Utilize QoS settings to prioritize bandwidth for critical devices.
Frequent Wi-Fi Disconnections	Update router firmware to the latest version. Check for strong signal strength in your location. Adjust antenna orientation. Reduce the number of connected devices if exceeding capacity.
Cannot Access Router's Web Interface	Ensure your device is connected to the router's network (wired or wireless). Verify the IP address or domain name entered in the browser is correct. Try clearing your browser's cache or using a different browser.
Forgot Wi-Fi Password or Login Credentials	Perform a factory reset by pressing and holding the RESET button for 5-10 seconds while the router is powered on. This will revert all settings to default, including Wi-Fi name and password (usually found on a label on the router). You will need to reconfigure the router after a reset.
