Victiv VTH7

Victiv VTH7 Camera Tripod Instruction Manual

Model: VTH7

Introduction

Welcome to your new Victiv VTH7 Camera Tripod. This manual provides detailed instructions for setting up, operating, and maintaining your tripod to ensure optimal performance for your photography and videography needs. Please read this manual thoroughly before using the product.

Key Features

- **Professional Fluid Head:** Offers 360° panning and +90°/-70° tilt for smooth and precise camera movements.
- **Wide Application:** Equipped with a quick release (QR) plate featuring standard 1/4" and 3/8" screws, compatible with most DSLR cameras, video cameras, camcorders, and digital cinema cameras.
- **2-in-1 Tripod & Monopod:** Easily converts to a monopod by combining the center column with a detachable tripod leg, offering versatility for various shooting scenarios.
- **Adjustable Height:** Convenient quick-release flip locks allow for height adjustment from 23.6 inches to 72 inches in seconds. The hydraulic head damping ensures smoother, more stable, and accurate operation.
- **Enhanced Stability:** High-quality aluminum construction provides great stability. A weight hook is included for hanging heavy objects to further increase stability.
- **Protective Packaging:** Unique packaging design ensures the tripod and fluid head are separately secured with foam for better preservation and to avoid wear and tear during transport.

What's in the Box

- Victiv Camera Tripod Stand
- Victiv Fluid Head
- Carry Bag
- Quick Release Plate (additional plates may be included)
- Allen Wrenches (for adjustments)

Setup

Attaching the Fluid Head

Before installing the fluid head onto the tripod, ensure the knob that controls the horizontal rotation of the head (often

highlighted in red) is tightened. Then, securely install the fluid head onto the tripod stand. After installation, loosen the knob slightly and turn the head slowly clockwise and counter-clockwise to confirm it is not loose and is functioning correctly.

Attaching the Quick Release Plate to your Camera

The fluid head is equipped with a quick release (QR) plate. To detach the plate, locate and press the QR release button. Align the 1/4" or 3/8" mounting screw on the QR plate with the tripod mount on your camera and tighten it securely. Once attached to your camera, slide the QR plate back into the fluid head until it locks into place.

Operating Instructions

Height Adjustment

To adjust the tripod's height, open the flip locks on each leg section. Extend the legs to your desired height and then close the flip locks to secure them. The center column can also be extended for additional height. The tripod offers a height range from 23.6 inches (folded) to 72 inches (fully extended).

Image: Visual guide to adjusting the tripod's height.

Angle Adjustment

Each tripod leg features an angle adjustment press buckle. Press the buckle to release the leg and adjust it to one of the preset angles (e.g., 22°, 52°, 82°). This allows for stable positioning on uneven surfaces or for achieving low-angle shots.

Image: How to adjust the leg angles for different shooting positions.

Fluid Head Movement

The fluid head provides smooth 360° panning and +90°/-70° tilting capabilities. Use the dedicated knobs on the fluid head to lock or loosen these movements. A built-in bubble level on the head ensures your camera is perfectly horizontal for level shots.

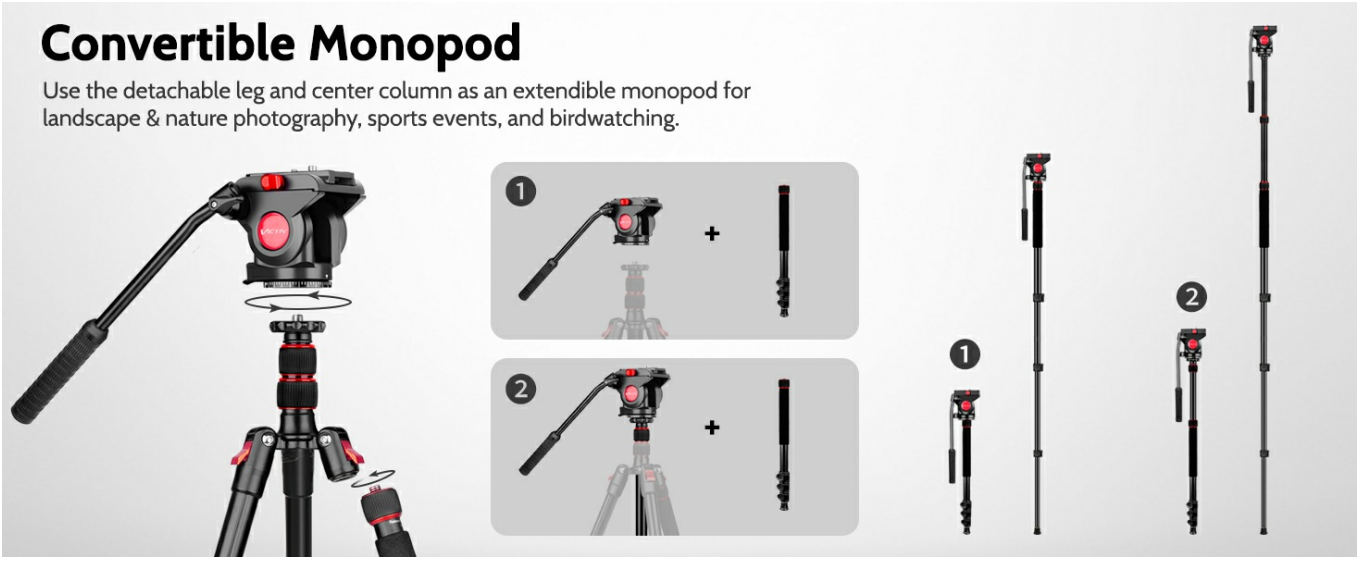

Image: Demonstrating the fluid head's range of motion.

Monopod Conversion

To convert your tripod into a monopod, unscrew and detach the leg with the foam grip. Then, unscrew the fluid head from the main tripod body and attach it to the top of the detached leg. This creates a portable monopod for flexible shooting on the go. The monopod can extend up to 74 inches.

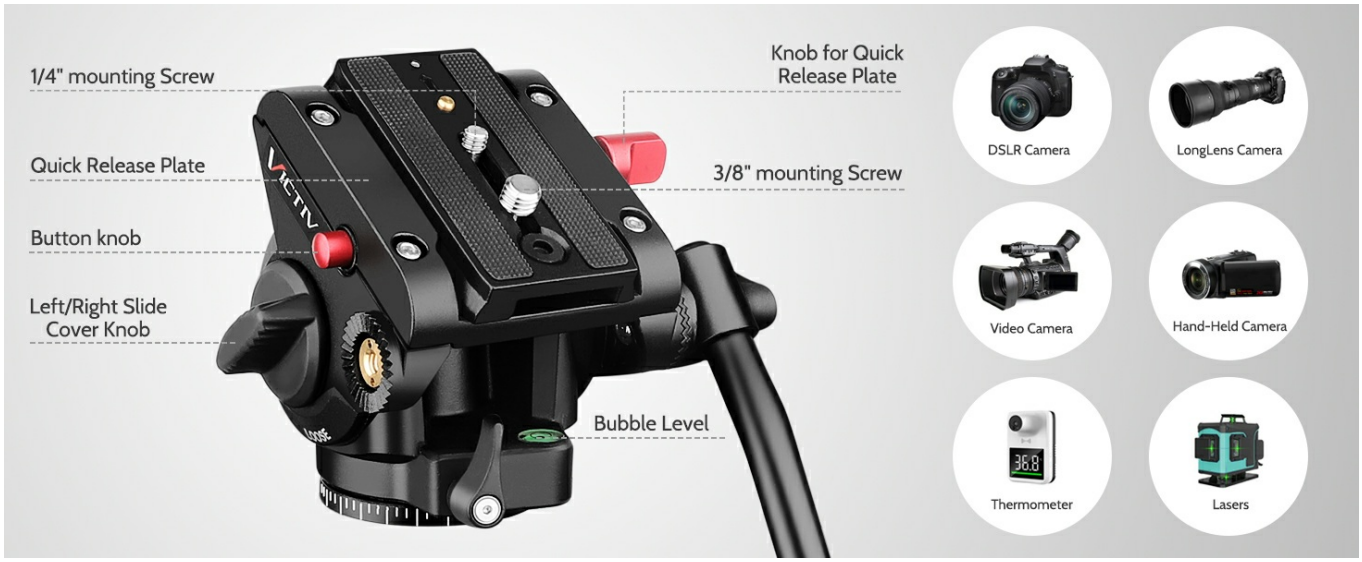

Image: Steps for converting the tripod to a monopod.

Foot Pads and Spikes

The tripod legs are fitted with removable non-slip rubber foot pads. For increased grip and stability on soft or uneven outdoor terrain, such as grass, dirt, or sand, you can unscrew and remove the rubber pads to expose the integrated metal spikes.

Maintenance

- **Regular Inspection:** Periodically check all screws, knobs, and locking mechanisms to ensure they are tight and functioning correctly. Tighten any loose parts with the provided Allen wrenches.
- **Cleaning:** Clean the tripod and fluid head with a soft, dry cloth after each use. For stubborn dirt, a slightly damp cloth can be used, followed by immediate drying. Avoid using abrasive cleaners or solvents, as these can damage the finish and internal components.
- **Storage:** Store the tripod in its dedicated carry bag in a cool, dry place away from direct sunlight and extreme temperatures. This prevents dust accumulation and protects the tripod from environmental damage.
- **Lubrication:** The fluid head is designed for smooth operation. Avoid disassembling or lubricating the fluid head unless specifically instructed by Victiv support, as this may void your warranty.

Troubleshooting

- **Tripod is unstable:** Ensure all leg sections are fully extended and their flip locks are securely closed. Verify that

the fluid head is tightly screwed onto the tripod base. For added stability, hang a heavy object (like your camera bag) on the weight hook located at the bottom of the center column.

- **Fluid head movement is stiff or jerky:** Check that all tension knobs on the fluid head are adequately loosened. Inspect for any debris or foreign objects that might be obstructing the movement. If the issue persists, contact customer support.
- **Quick release plate is difficult to attach/detach:** Ensure the quick release button or lever on the fluid head is fully disengaged before attempting to insert or remove the plate. Do not force the plate, as this can damage the mechanism.
- **Leg sections do not extend/retract smoothly:** Check for any dirt or sand in the leg locking mechanisms. Clean the leg sections and locks. Ensure the flip locks are fully open when extending or retracting.

Specifications

Feature	Detail
Model Name	VTH7 Fluid Head Tripod
Load Capacity	20 Pounds (9 kg)
Folded Height	21 Inches (53 cm)
Tripod Height Range	23.6 Inches - 72 Inches
Monopod Height Range	21 Inches - 74 Inches
Net Weight	4.73 Pounds (2.15 kg)
Material	Aluminum
Tripod Head Type	Pan Heads
Compatible Devices	All DSLR Cameras, Camcorders, Telescope, Binoculars, Spotting Scope, Projector, Laser Level, Digital Cameras

Warranty and Support

Victiv products are designed for durability and performance. For specific warranty information, technical support, or to inquire about replacement parts, please refer to the contact details provided with your purchase or visit the official Victiv website. It is recommended to retain your proof of purchase for any warranty claims.

Ask a question about this manual

Ask about setup, troubleshooting, compatibility, parts, safety, or missing instructions. Manuals+ will review the question and use this page's manual context to help answer it.
