## **AEMC INSTRUMENTS MiniFlex 3000-14-1-1 Flexible AC Current Sensor**

Statement of Compliance

Chauvin Arnoux®, Inc. d.b.a. AEMC® Instruments certifies that this instrument has been calibrated using standards and instruments traceable to international standards.

We guarantee that at the time of shipping your instrument has met its published specifications.

An NIST traceable certificate may be requested at the time of purchase, or obtained by returning the instrument to our repair and calibration facility, for a nominal charge.

The recommended calibration interval for this instrument is 12 months and begins on the date of receipt by the customer. For recalibration, please use our calibration services. Refer to our repair and calibration section at www.aemc.com.

Serial #:	
Catalog #: 2132.60/2132.63	
Model #: 3000-14-1-1 / 3000-24-1-1

#### INTRODUCTION

#### WARNING

These safety warnings are provided to ensure the safety of personnel and proper operation of the instrument.

 Read this instruction manual completely and follow all the safety information before attempting to use or service this instrument.

Safety is the responsibility of the operator. The MiniFlex® must be used only by qualified personnel using applicable safety precautions.

Wear protective clothing and gloves as required.

Use caution on any circuit: potentially high voltages and currents may be present and may pose a shock

hazard.

Read the safety specifications section prior to using the current probe. Never exceed the maximum voltage ratings given.

ALWAYS de-energize the circuit before wrapping the MiniFlex® around bare conductors, bus bars, or near live parts. Do not wrap on live conductors.

ALWAYS connect the electronic module to the display device before wrapping the MiniFlex® around the sample being tested.

ALWAYS inspect the module, sensor, sensor cable, and output terminals prior to use. Replace any defective parts immediately. Use only factory parts.

NEVER use the MiniFlex® on electrical conductors rated above 1000V CAT III; 600V CAT IV.

#### 1.1 International Electrical Symbols

## 1.2 Definition of Measurement Categories

CAT II: For measurements performed on circuits directly connected to the electrical distribution system. Examples are measurements on household appliances or portable tools.

CAT III: For measurements performed in the building installation at the distribution level such as on hardwired equipment in fixed installation and circuit breakers.

CAT IV: For measurements performed at the primary electrical supply (<1000V) such as on primary overcurrent protection devices, ripple control units, or meters.

## 1.3 Receiving Your Shipment

Upon receiving your shipment, make sure that the contents are consistent with the packing list. Notify your distributor of any missing items. If the equipment appears to be damaged, file a claim immediately with the carrier and notify your distributor at once, giving a detailed description of any damage. Save the damaged packing container to substantiate your claim.

1.4 Ordering Information

Order Accessories and Replacement Parts Directly Online Check our Storefront at www.aemc.com/store for availability

### PRODUCT FEATURES

### 2.1 Description

The MiniFlex® is a compact flexible AC current transformer composed of a flexible sensor and an electronic module. The flexible sensor permits measurements on conductors where standard clamp-on probes could not be used. In particular, it can be installed in confined spaces, places where access is difficult, or even wrapped around irregular shapes.

The MiniFlex® is lightweight. It does not use magnetic cores like standard transformers. The transformation principle is based on an air core. It pres- ents virtually no load to the system under test, has a low phase shift and excellent frequency response, and cannot be damaged by overloads. The sensor assembly is insulated for 1000V CAT III; 600V CAT IV. The Mini- Flex® meets EN 61010 and is CE marked.

The MiniFlex® has an mV output proportional to the current measured for direct readings on DMMs, data loggers, oscilloscopes, and power or harmonic meters. TRMS measurements are taken when connected to a TRMS meter. The MiniFlex® is insensitive to DC currents and only the AC component of the measured signal is measured.

Measures from 0.5Arms to 3000Arms (model dependent)

Accuracy 1% of Reading ± 0.25A

TRMS measurements when connected to a TRMS instrument

No core saturation or damage if overloaded

Overrange LED indication

EN 61010; 1000V CAT III; 600V CAT IV; CE Mark

9V battery for typical 140 hours continuous operation

20kHz frequency response

Low phase shift for power measurements

Insensitive to DC, measures only AC component on DC + AC signals

**Excellent linearity** 

Lightweight

Sensor is resistant to oils and aliphatic hydrocarbons

#### 2.3 Control Features

- 1. 1. Flexible sensor
  - 2. Sensor opening device
  - 3. Shielded cord
  - 4. BNC output connector
  - 5. Red OL (overload) indicator
  - 6. Green ON/OFF and Low Battery indicator
  - 7. Range selection switch

# **SPECIFICATIONS**

- 1. (1): Peak factor PF = Vpeak/Vrms
  - (2): The residual noise affects the measurement uncertainty according to the formula:

If the current measured is zero, the uncertainty is equal to the residual noise.

- 3.1 Typical Frequency Response Graphs 3.1.1 Amplitude Error
- 3.1.2 Phase Error
- 3.1.3 Frequency Limitation Versus Amplitude

#### **OPERATION**

#### 4.1 Compatibility

The MiniFlex® is compatible with any multimeter, AC voltmeter, or other voltage measuring instrument with an input impedance greater than  $1M\Omega$ . To achieve the best overall accuracy, use the MiniFlex® with an AC voltmeter having an accuracy of 0.75% or better.

4.2 Tips for Making Precise Measurements

When using the MiniFlex® with a meter, it is important to select the range that provides the best resolution. Failure to do this may result in measurement errors.

Make sure the DMM or measuring instrument can accurately measure mVAC. Certain inexpensive DMM have

poor resolution and accuracy when measuring low mVAC.

For best accuracy, center the MiniFlex® around the conductor to be measured.

The overall measurement accuracy is the sum of the MiniFlex® accuracy and the displaying instrument accuracy.

# 4.3 Making Measurements

- 1. 1. Connect the electronic module to the AC Volt range of a multimeter or measuring instrument. Select the highest range on the MiniFlex®.
- 2. 2. Press the sensor's yellow opening device to open the flexible coil.
  - 3. Wrap the coil around the conductor to be tested. If possible, within range, select the lowest range to obtain the best resolution.
- 3. 4. Do not exceed specified current range for the output. Do not use on selected range if overload LED goes on.
  - 5. Read the displayed value on the multimeter and divide it by the range selected (i.e. if reading = 2.59V with the 1mV/A output range, the current flowing through the probe is 2590mV = 2590A).
  - 6. For best accuracy, carefully center the conductor inside the flexible core, and if possible, avoid being in the proximity of other conductors which may create noise and interference (particularly near the latch).
  - 7. True RMS measurements are obtained when the MiniFlex® is connected to a True RMS meter. Note that the DC component is not measured.

#### **MAINTENANCE**

## Warning

For maintenance use only specified replacement parts.

To avoid electrical shock, do not attempt to perform any servicing unless you are qualified to do so.

To avoid electrical shock and/or damage to the instrument, do not get water or other foreign agents into the case.

Turn the instrument OFF and disconnect the unit from all the circuits before opening the case.

#### **Battery Replacement**

The battery must be replaced when the green indicator flashes or remains off when the instrument is switched on.

- Disconnect everything connected to the instrument and set the switch to OFF.
  - Use a screwdriver to unscrew the two screws on the housing.
  - Replace the old battery with a new one (9V alkaline or lithium bat-tery of type 6LF22).
  - Close the housing, making sure that it is completely and correctly closed, then screw both screws back in.

# Cleaning

 It is important to keep the sensor latch mating surfaces clean to prevent foreign matter from entering the closing.

The sensor may be gently cleaned with a soft cloth, soap and water. Dry immediately after cleaning. Avoid water penetration into the electronic module.

Make sure the sensor, electronic module, and all leads are com-pletely dry before any further use.

## Repair and Calibration

To ensure that your instrument meets factory specifications, we recommend that it be scheduled back to our factory Service Center at one-year intervals for recalibration, or as required by other standards or internal procedures.

For instrument repair and calibration:

You must contact our Service Center for a Customer Service Authorization Number (CSA#). This will ensure that when your instrument arrives, it will be tracked and processed promptly. Please write the CSA# on the outside of the shipping container. If the instrument is returned for calibration, we need to know if you want a standard calibration, or a calibration traceable to N.I.S.T. (Includes calibration certificate plus recorded calibration data). Ship To: Chauvin Arnoux®, Inc. d.b.a. AEMC® Instruments

15 Faraday Drive Dover, NH 03820 USA

Phone: (800) 945-2362 (Ext. 360)

(603) 749-6434 (Ext. 360)

Fax: (603) 742-2346 or (603) 749-6309 E-mail: repair@aemc.com

(Or contact your authorized distributor)

Costs for repair, standard calibration, and calibration traceable to N.I.S.T. are available.

NOTE: You must obtain a CSA# before returning any instrument.

Technical and Sales Assistance

If you are experiencing any technical problems, or require any assistance with the proper operation or application of your instrument, please call, mail, fax or e-mail our technical support team:

Chauvin Arnoux®, Inc. d.b.a. AEMC® Instruments 200 Foxborough Boulevard

Foxborough, MA 02035 USA Phone: (800) 343-1391

Phone: (800) 343-1391 (508) 698-2115

Fax: (508) 698-2118

E-mail: techsupport@aemc.com

www.aemc.com

NOTE: Do not ship Instruments to our Foxborough, MA address.

# Limited Warranty

The MiniFlex® is warranted to the owner for a period of two years from the date of original purchase against defects in manufacture. This limited warranty is given by AEMC® Instruments, not by the distributor from whom it was pur- chased. This warranty is void if the unit has been tampered with, abused or if the defect is related to service not performed by AEMC® Instruments.

Full warranty coverage and product registration is available on our website at www.aemc.com Please print the online Warranty Coverage Information for your records.

What AEMC® Instruments will do:

If a malfunction occurs within the warranty period, you may return the instrument to us for repair, provided we have your warranty registration information on file or a proof of purchase. AEMC® Instruments will, at its option, repair or replace the faulty material.

# Warranty Repairs

What you must do to return an Instrument for Warranty Repair:

First, request a Customer Service Authorization Number (CSA#) by phone or by fax from our Service Department (see address below), then return the instrument along with the signed CSA Form. Please write the CSA# on the outside of the shipping container. Return the instrument, postage or shipment pre-paid to:

Ship To: Chauvin Arnoux®, Inc. d.b.a. AEMC® Instruments

15 Faraday Drive • Dover, NH 03820 USA Phone: (800) 945-2362 (Ext. 360)

(603) 749-6434 (Ext. 360)

Fax: (603) 742-2346 or (603) 749-6309 E-mail: repair@aemc.com

Caution: To protect yourself against in-transit loss, we recommend you insure your returned material.

NOTE: You must obtain a CSA# before returning any instrument.
