7. Troubleshooting

Problem	Solution
No audio from headset	◦ Ensure the 3.5mm audio cable is fully inserted into both the headset and the device. ◦ Check the volume control dial on the headset and your device to ensure volume is not set to minimum or muted. ◦ If using a PC splitter, ensure both audio and mic plugs are correctly connected to their respective ports. ◦ Test the headset with another device to rule out device-specific issues.
Microphone not working	◦ Ensure the removable boom microphone is securely attached to the headset. ◦ Check the microphone mute switch on the headset/mic and ensure the mic-status LED indicates it is active (not muted). ◦ Verify microphone input settings on your gaming console or PC. ◦ If using a PC splitter, ensure the microphone plug is correctly connected.
Sound quality is poor or distorted	◦ Ensure the audio cable is not damaged and is fully inserted. ◦ Adjust the volume levels on both the headset and the connected device. ◦ Test with another audio source to determine if the issue is with the headset or the source device.
