5. Operating

Once installed, the range hood filter operates passively by capturing grease and other airborne particles as air is drawn through the range hood system. This helps to keep your kitchen air cleaner and protects the internal components of your range hood.

6. Maintenance

Regular cleaning and timely replacement of your range hood filter are crucial for maintaining optimal grease capture and ensuring proper kitchen ventilation.

Cleaning Instructions:

- The aluminum mesh filters are dishwasher safe. Place them in your dishwasher for easier cleaning compared to hand washing.
- For hand washing, use warm, soapy water and a soft brush to gently remove grease buildup. Rinse thoroughly and allow to air dry completely before reinstallation.

Replacement Recommendation:

It is recommended to replace the range hood filter every 6-12 months, or sooner if they appear dingy or heavily soiled, to ensure continued effectiveness.

7. Troubleshooting

Filter Does Not Fit:

- **Check Dimensions:** Verify that the dimensions of your range hood's filter slot precisely match the filter's dimensions (17-1/4" x 11-3/4" x 3/8"). Even slight discrepancies can prevent proper fit.
- **Confirm Compatibility:** Double-check that your range hood model number is listed among the compatible models or part numbers provided in Section 3.
- **Inspect for Obstructions:** Ensure there are no obstructions or debris in the filter slots of your range hood that might prevent the new filter from sliding in smoothly.
