Relay User Manual

Updated January 27, 2021

Relay is a wireless, low-voltage relay featuring potential-free (dry) contacts. Use Relay to remotely switch on/off appliances powered by a 7-24 V DC source. Relay can operate both in pulse and bistable mode. The device

communicates with a hub via Jeweller radio protocol. In the line of sight, the communication distance is up to 1,000 m.

 Regardless of the type of electrical circuit, only a qualified electrician should install Relay!
The Relay contacts are not galvanically connected to the device itself, so they can be connected to the input control circuits of various equipment to imitate a button, toggle switch, etc.

 Relay is compatible only with Ajax hubs and does not support connecting via cartridge or Oxbridge Plus.
