Introduction

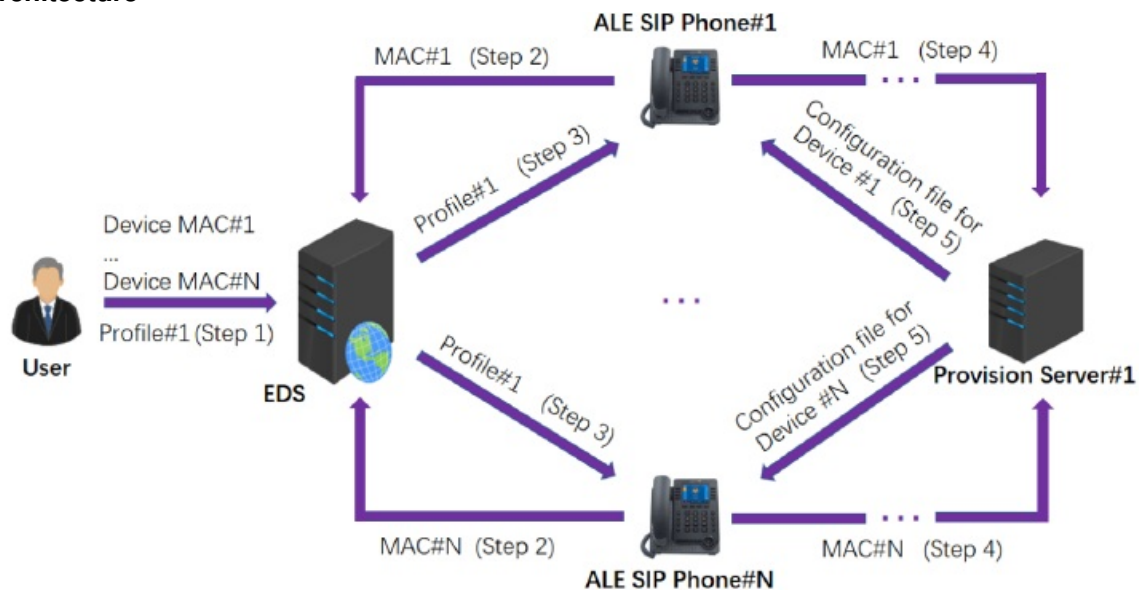

General Description

- EDS (Easy Deployment Server) is a deployment server that provides the possibility for ALE SIP devices to connect to the provisioning server or get pre-configured.
- It has a web-based interface for the user to manage corresponding functionality.
- Besides using EDS as a direct deployment server to make ALE devices get pre-configured, the user needs to input the provision server address for the device to connect to 3rd provision server.
- If the server is SSL/TLS-based, a certificate is also needed.
- The MAC address of the SIP device is associated with the provisioning server address and certificate.
- When the SIP devices connect to the EDS server, they can acquire provision server information from it and download the config files from the provision server automatically.
- For more details about pre-configure functionality, please find the EDS Enterprise Administration Manual.

Abbreviations & Glossaries

EDS	Easy Deployment Server
REST	Representational State Transfer
API	Application Interface
BP	Business Partner
BiZ	Business

Global Architecture

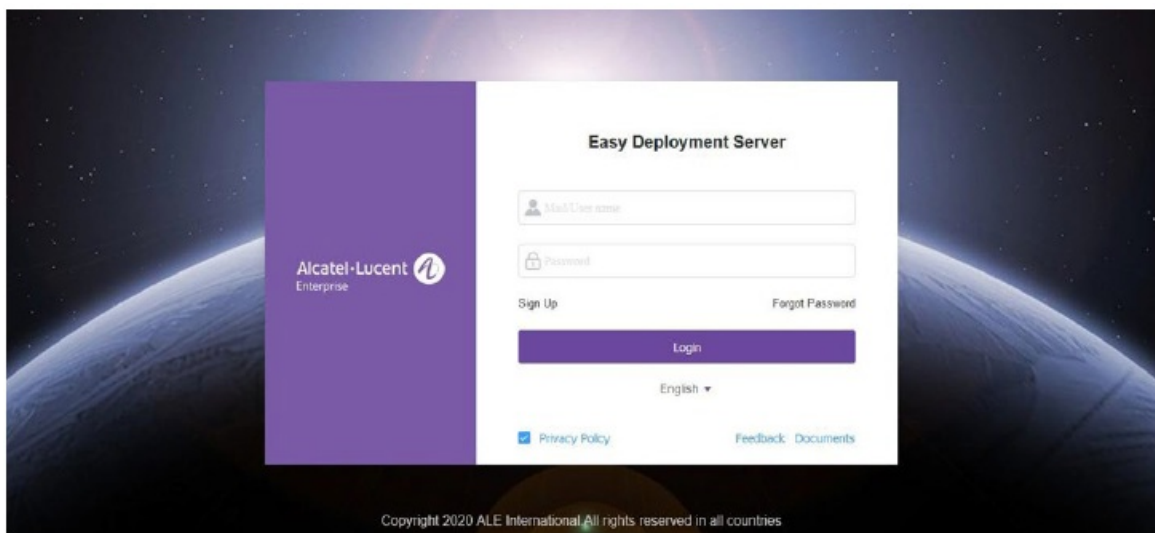

Note:

- The URL of the provision server, provision authentication info, certificate, and configuration parameters could be stored in the profile, but neither of them is to have.
- Thus, the pre-condition for Step 4 is that Profile#1 contains the URL of Provision Server #1

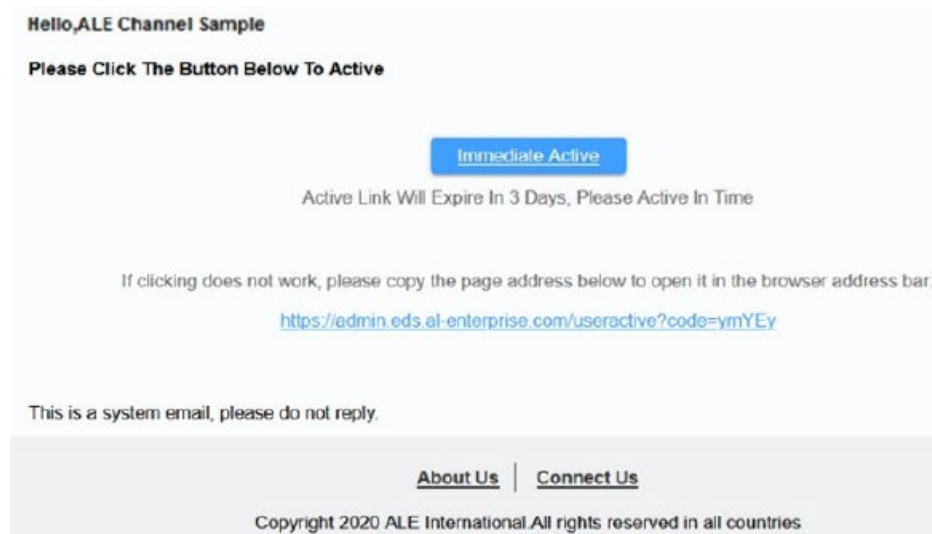

Channel User Management

Registering Channel User

- A new channel user account needs to be created by the ALE administrator.
- The URL of EDS is <https://admin.eds.al-enterprise.com>. Users can click the “Sign Up” button on the EDS web page, then fill in the below info to apply for an account.
