ASDGH HEPA Vacuum Cleaner Filters User Manual

Model: cover girl shop

Introduction

This manual provides essential information for the installation, operation, and maintenance of your ASDGH HEPA Vacuum Cleaner Filters. These filters are designed to enhance air quality and prolong the life of your vacuum cleaner. Please read this manual thoroughly before use.

Compatibility

These filters are compatible with the following vacuum cleaner models:

- MOOSOO D600 corded vacuum cleaner
- MOOSOO D601 corded vacuum cleaner
- MOOSOO iwoly V600 corded vacuum cleaner
- Conga Thunderbrush 520
- Conga Thunderbrush 550
- Conga Thunderbrush 560
- Ariete Handy Force 2761
- Ariete Handy Force 2759
- HANDY FORCE RBT

Package Contents

Your package includes:

- ASDGH HEPA Filters (SET 4, SET 3, SET 2, or SET 1 depending on your purchase)
- Foam Filters (corresponding quantity)
- Cleaning Brush (if included in the set)

Figure 1: Example of package contents, including HEPA filters, foam filters, and a cleaning brush.

Setup and Installation

Follow these steps to properly install your new filters:

1. **Power Off and Unplug:** Before attempting any installation or maintenance, ensure your vacuum cleaner is turned off and unplugged from the power outlet to prevent electric shock.
2. **Locate Filter Compartment:** Refer to your vacuum cleaner's original manual to locate the filter compartment. This is typically near the dustbin or motor.
3. **Remove Old Filters:** Carefully remove the old HEPA filter and foam filter. Dispose of them according to local regulations.
4. **Insert New Foam Filter:** Place the new circular foam filter into its designated slot. Ensure it sits flat and covers the area completely.

Figure 2: The circular foam filter.

5. **Insert New HEPA Filter:** Insert the new cylindrical HEPA filter into its housing. Ensure the filter is oriented correctly and clicks securely into place.

Figure 3: The cylindrical HEPA filter.

Figure 4: Another view of the HEPA filter, highlighting its pleated design.

6. **Close Compartment:** Securely close the filter compartment door or cover.
7. **Test:** Plug in your vacuum cleaner and perform a brief test to ensure proper operation.

Operating Principles

These filters are crucial for the optimal performance of your vacuum cleaner and for maintaining a healthy indoor environment. They work by:

- **Exceptional Filtration Efficiency:** The HEPA filters capture fine particles such as dust, pollen, pet dander, and other allergens, preventing them from recirculating into the air.
- **Healthier Home Environment:** By significantly reducing harmful substances like dust mites and mold spores, these filters improve indoor air quality and help alleviate allergy symptoms.
- **Prolonged Vacuum Cleaner Lifespan:** The filters act as a protective barrier, preventing dust and debris from entering sensitive internal components of the vacuum, thereby reducing wear and tear and extending the appliance's operational life.

Maintenance

Regular maintenance of your filters is essential for optimal performance and longevity. It is recommended to clean the filters regularly and replace them as needed.

Cleaning the Filters

The HEPA and foam filters can be cleaned to maintain efficiency:

1. **Remove Filters:** Turn off and unplug the vacuum cleaner. Remove both the HEPA and foam filters as described in the installation section.
2. **Tap to Remove Debris:** Gently tap the HEPA filter against a trash can to dislodge loose dust and debris. Use the included cleaning brush (if applicable) to brush away stubborn particles from the pleats.
3. **Rinse (Foam Filter Only):** The foam filter can be rinsed under cool running water. Ensure all dirt is washed away.
4. **Dry Completely:** Allow both filters to air dry completely for at least 24 hours before reinstallation. Do not use a dryer or direct heat, as this can damage the filter material. Reinstalling wet filters can damage your vacuum cleaner.

Filter Replacement

The lifespan of filters varies depending on usage and environment. It is generally recommended to replace your HEPA and foam filters every 3-6 months, or sooner if you notice a decrease in suction power or an increase in dust escaping the vacuum.

Figure 5: HEPA filter and foam filter ready for cleaning or replacement.

Troubleshooting

Problem	Possible Cause	Solution
Decreased Suction Power	Clogged filters, full dustbin.	Clean or replace filters. Empty dustbin. Check for blockages in hose/attachments.
Dust Escaping Vacuum	Damaged or improperly installed filters.	Ensure filters are correctly seated. Replace damaged filters.
Unusual Odor from Vacuum	Dirty filters, trapped debris.	Clean or replace filters. Clean dustbin and internal components.

Specifications

- **Product Type:** HEPA and Foam Vacuum Cleaner Filters
- **Brand:** ASDGH
- **Model Number:** cover girl shop
- **Dimensions (HEPA Filter):** Approximately 59mm (2.32in) diameter x 98mm (3.86in) height

Figure 6: Dimensions of the HEPA and foam filters.

- **Dimensions (Foam Filter):** Approximately 80mm (3.15in) diameter x 72mm (2.83in) height
- **Material:** HEPA filter media, foam
- **Country of Origin:** China
