Compatibility

You can use this filter with SESSES 990/980/500/878/875/0/920/810 coffee machines. It protects your coffee machine from scale accumulation, which often happens on the internal parts. You only have to replace the filter after 100L of use, reducing the need to descale your machine.

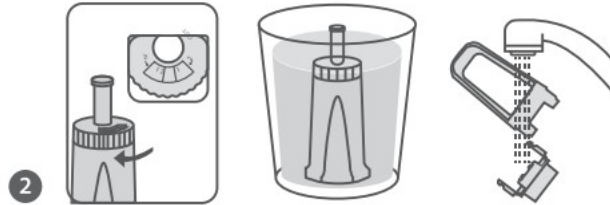

Notice: You may have a slightly different filtration capacity due to local water quality.

Installation instructions

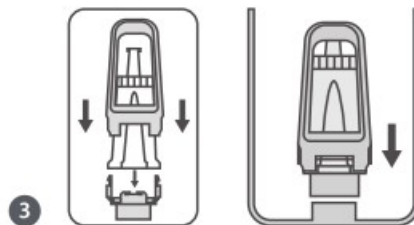

1. Take out the water tank and the filter holder. Then separate the water filter parts.

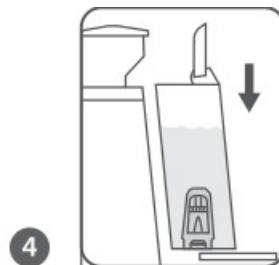

2. Set the current month and then leave the filter in cold water to soak for five minutes. Finally, remove and wash with cold water. Notice: It is best to replace the filter after 100L of use.

3. Slot in the filter into both parts of the filter holder. You can install the assembled filter holder into the water tank by aligning the base of the filter holder with the water tank's adapter. Once well positioned, push it down to lock it into place

4. Pour some cold water into the water tank until it is full. Then, slide back into position at the back of the machine. That will lock it into place.

Warning

Avoid using micro-biologically unsafe water or water with unascertained quality to protect yourself from ingesting contaminants, which otherwise could lead to severe injuries and even death. This filter will only perform optimally if installed in line with the instructions provided above. Always store your new filter in a cool, dark, and dry place

tuv-sud.com/ps-cert

Filtration Capacity: 100L

In accordance with EN 17093; compet Average Chlorine Reduction 80%

Model: AS-CF100
