Troubleshooting

If you encounter any issues, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Bed feels wobbly or unstable.	Loose hardware.	Check and tighten all bolts and screws. Ensure all connections are secure.
Parts do not align during assembly.	Incorrect orientation of parts; bolts overtightened prematurely.	Review the assembly manual diagrams. Loosen bolts, realign parts, then retighten.
Squeaking noises.	Loose connections; friction between metal parts.	Tighten all hardware. Apply a small amount of silicone lubricant to connection points if squeaking persists.

If the problem persists or is not listed here, please contact FocusOnHome customer support for assistance.
