6. Troubleshooting

Problem	Possible Cause	Solution
Rack is wobbly or unstable.	Uneven floor; loose hardware; not secured to wall.	Adjust the leveling feet; tighten all screws and bolts; ensure anti-tip kit is properly installed and secured to the wall.
Power outlets are not working.	Power switch is off; power cord not plugged in; circuit overload.	Ensure the power switch on the strip is ON; check that the main power cord is securely plugged into a wall outlet; unplug some devices to reduce load, then try again. If problem persists, contact support.
Cabinet doors do not align properly.	Hinges are not adjusted correctly; frame is not square.	Adjust the screws on the hinges to align the doors; ensure the main frame is assembled squarely and all screws are tightened.
