BOON2VIALK Cat 6 Ethernet Patch Cable

Use Instructions

Before connecting, ensure that the equipment ports are compatible with the RJ45 Cat-5/Cat-6/Cat-6a connector. To connect, fully insert the RJ45 Cat-6 connector into a designated port. The locking clip should fully engage as shown in Fig. 1. If the connection is not working:

1. Check that both ends of the cable are firmly connected with the locking clips fully engaged.
2. Take out the RJ45 Cat-6 connectors and inspect them for any dust or foreign matter. Clean using a dry, soft brush and then reconnect (Fig. 2).
3. Establish the network connection and confirm data transmission between the signal input end and the receiving end. You can do this by opening the Network/Ethernet settings on your PC/Mac.

Disposal (for Europe only)

The Waste Electrical and Electronic Equipment (WEEE) laws aim to minimise the impact of electrical and electronic goods on the environment and human health, by increasing re-use and recycling and by reducing the amount of WEEE going to landfill. The symbol on this product or its packaging signifies that this product must be disposed separately from ordinary household wastes at its end of life. Be aware that this is your responsibility to dispose of electronic equipment at recycling centres in order to conserve natural resources. Each country should have its collection centres for electrical and electronic equipment recycling. For information about your recycling drop off area, please contact your related electrical and electronic equipment waste management authority, your local city office, or your household waste disposal service.

MADE IN VIETNAM
