Amazon Echo Connect

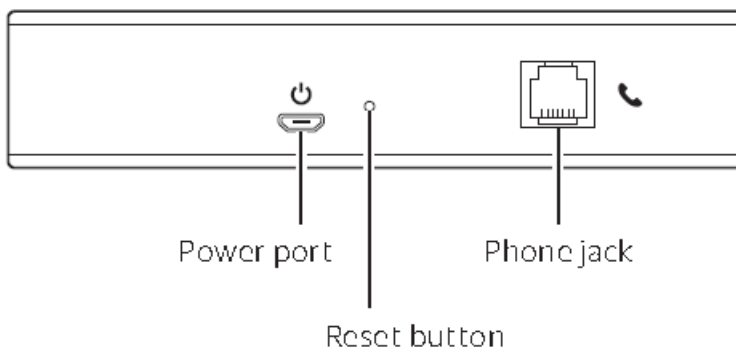

What's in the box

Setup

1. Connecting your device

1. Plug the provided phone cable into the device phone jack, then plug the other end into your home phone jack or VoIP phone adapter.
2. Plug the power adapter into your device and then into a power outlet.

The power light should be solidly lit and the Wi-Fi light should be flashing orange, indicating your device is ready for set up.

Go to the Alexa App to complete set up.

2. Configure the Alexa App

To use your device, you must have a supported Echo device. If you have recently purchased one, please set it up prior to proceeding.

1. Set up Alexa calling and messaging in the Alexa App. If you have already done so, skip to the next step.
2. Go to the Alexa App on your mobile phone. Go to Settings > Set up a new device. During setup, you will need to connect your device to the Internet, so you will need your Wi-Fi password.

Getting started with your device

Calling with your device

The device uses the contacts on your mobile phone. To initiate a call just say, “Alexa, call Mom on her mobile” or “Alexa, call 206-555-1234.”

Alexa App

The app helps you get more out of your Echo devices and accessories. It’s also where you can change your device settings, including your dialing preferences.

Give us your feedback

We want to hear about your experiences.
Use the Alexa App to send us feedback or go to
