PIR Motion Detection Settings

Enter the application – "Parameter Setting" – "Motion Detection' interface

Sensitivity	Detecting Distance (For moving objects)
Level 1-3 (Low)	Up to 4-5 meters
Level 4-7 (Med)	Up to 5-8 meters
Level 8-10 (High)	Up to 8-13 meters

Warm Tips:

- When you encounter the missed or delayed alarm frequently in using this camera, you can adjust the motion detection sensitivity to solve them.
- If you notice the poor performance of motion detection in the night environment, try to turn off "Night Detection".

Product Specification

Resolution	3MP/5MP @ 12-15fps
Storage	TF Card (max. 128GB), Cloud Storage
WiFi	Only 2.4GHz
Infrared LED	850nm
Waterproof	P65
OS	I0S (>8); Android (>4.2)
Wi-Fi Standards	IEEE 802.11b/g/n
Power	5V 1A
Working Temp & Humidity	-20C – 50C (-4°F-122°F) <90% (no condensation)

FAQs

1) The device prompts offline?

• Check whether the equipment is in the power-on tat hether th King light of state, and observe whether ihe working light o the equipment is on normally. • Check whether the Wi-Fi network is in good condition and restart the router. • If the device is located far away from the router, which results in the inability to obtain a good Wi- Fi signal, it is re mmended to move the router to signal, it Is recomme a closer place or add a Wi-Fi amplifier to improve the Wi-Fi performance of the home. • Delete the camera from your ANRAN account and add it again after resetting the device. • Check whether the device firmware and application program are the latest version.

2) Update router or Wi-Fi password?

Delete the camera from your ANRAN account. After resetting the device, use the new Wi-Fi and password to add it again.

3) Can't play historical video?

4) Why doesn't the device identify the SD card ?

• Please insert the Micro SD card before power on; • Itis recommended fo use San Disk, Samsung and ' other brand cards; • Itis recommended to use a standard class 10 TF card; • Only FAT32 formatt is supported. • TF card con:(be ctjentmgd when the internet environment is not good.

5) Why the battery life of my device is poor?

• Please check whether the number of alarms is too frequent. Because the working time of the device determines the battery life. The more frequent IR wake-ups, the faster the battery consume due to the longer working time. It is recommended to appropriately lower the motion detection A sensitivity of the device and set the alarm interval and alarm time plan. (Note: Outdoor air conditioning units, moving cars and the passing pedestrians will cause frequent alarms. Please adijust the angle of the device to avoid these objects. • In cold

weather, the battery capacity will be reduced, which will affect the endurance of the device.

. 6) The phone cannot receive the ulerm pusl?

7) 7) How to judge whether the charging is successful?

The device's charging indicator light is red, which means it is charging. A blue light means that charging is complete. It will take approximately 10 hours or more to fully charge.

8) What should I do if the charge fails?

• Determine whether the power adapter is good, try another one. • Determine whether the Type-C charging cable is good, try another one. • The charging indicator may be defective, please check the charging condition in the phone APP. • Determine whether the charging port of the device is not in good contact with the Type-C charging cable. • The device has a low temperature charging protection module, please don't charge the device at low temperatures.
