Apple QUADRO Move From Android To IPhone IOS App

Product Information

The Move to iOS app is designed to help users switch from their Android device to their new Apple device, such as iPhone, iPad, or iPod touch. It allows for the seamless transfer of various data, including contacts, messages, photos, videos, and even free apps that are available on both Google Play and the App Store.

Product Usage Instructions

1. Download the Move to iOS app from Google Play Store on your Android device. If you can't access the Play Store, learn how to download the app.
2. Turn on your new Apple device and place it near your Android device.
3. Follow the onscreen setup instructions on your Apple device. On the Quick Start screen, tap "Set Up Manually" and continue following the prompts. You might need to activate your eSIM during this process.
4. Look for the "Apps & Data" screen on your Apple device and tap "Move Data from Android". If you have already finished the setup, you will need to erase your iOS device and start over. If you wish to transfer content manually, you can skip this step.
5. On your Android device, open the Move to iOS app. If you don't have the app, use your new iOS device to scan the QR code displayed on the screen using its camera. This will open the Google Play Store where you can download the Move to iOS app. Read and agree to the terms and conditions.
6. Wait for a ten-digit or six-digit code to appear on your iOS device. Ignore any alerts about weak internet connection on your Android device.
7. Tap "Continue" on your iOS device when you see the "Move from Android" screen.
8. After the transfer completes, tap "Done" on your Android device and then tap "Continue" on your iOS device.
9. Follow the onscreen steps to finish the setup for your iOS device.
10. Check if all your content has been transferred. You may need to manually move music, books, PDFs, and other
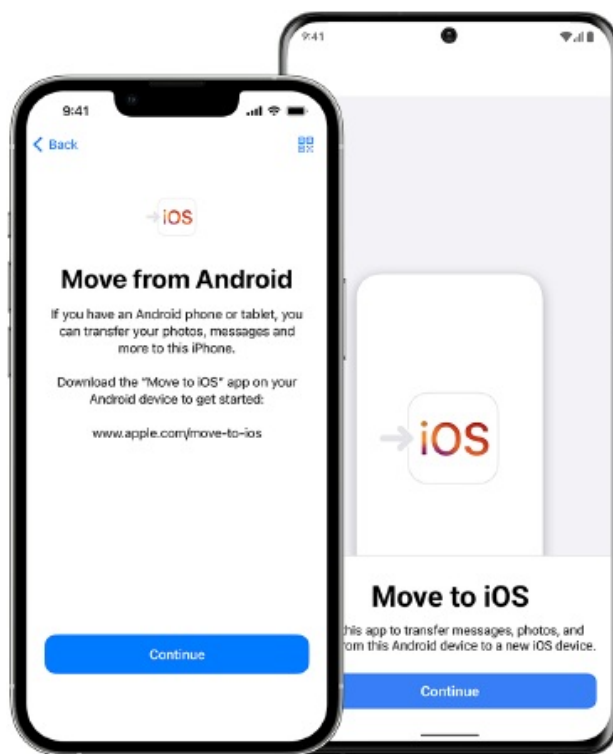

specific files. Visit the App Store on your iOS device to download any apps that were previously on your Android device.

If you need further assistance or information, you can visit the **Apple website**.
Ready to transfer to iOS? Download the Move to iOS app to get help switching from your Android device to your new iPhone, iPad, or iPod touch.

Get Move to iOS from Google Play
If you can't use the Google Play Store, learn how to download Move to iOS.

Before you begin

- On your Android device, make sure that Wi-Fi is turned on.
- Plug your new iOS device and your Android device into power.
- Make sure that the content you're moving, including what's on your external Micro SD card, will fit on your new iOS device
- If you want to transfer your Chrome bookmarks, update to the latest version of Chrome on your Android device.

Get started on your Apple device
Turn on your new Apple device and place it near your Android device. On your Apple device, follow the onscreen setup instructions. On the Quick Start screen, tap Set Up Manually, then continue to follow the onscreen instructions. You might be asked to activate your eSIM.

Tap Move Data from Android

Look for the Apps & Data screen. Then tap Move Data from Android. (If you already finished setup, you need to erase your iOS device and start over. If you don't want to erase, just transfer your content manually.)

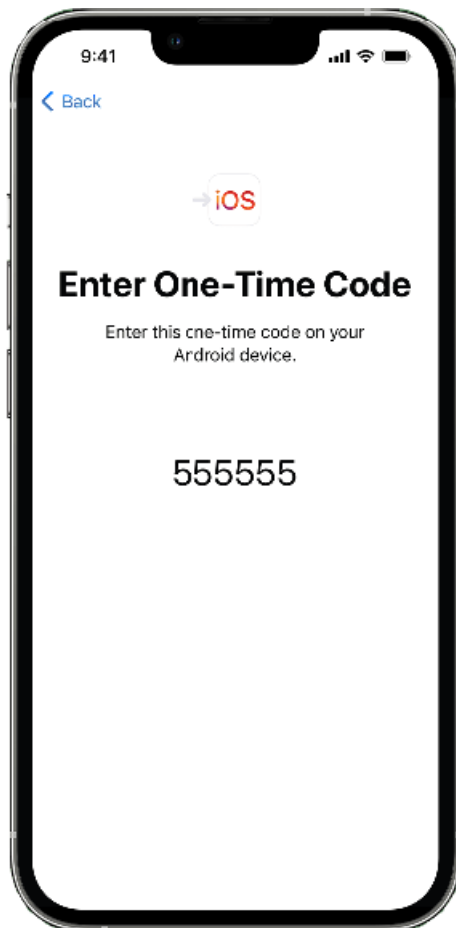

Open the Move to iOS app

On your Android device, open the Move to iOS app. If you don't have the Move to iOS app, you can tap the QR code button on your new iOS device and scan the QR code using the camera on your Android device to open the Google Play Store. Tap Continue, and read the terms and conditions that appear. To continue, tap Agree.

Wait for a code
On your iOS device, tap Continue when you see the Move from Android screen. Then wait for a ten-digit or six-digit code to appear. If your Android device shows an alert that you have a weak internet connection, you can ignore the alert.

Enter the code on your Android device. Connect to a temporary Wi-Fi network Your iOS device will create a temporary Wi-Fi network. When asked, tap Connect to join that network on your Android device. Then wait for the Transfer Data screen to appear. Choose your content and wait On your Android device, select the content that you want to transfer and tap Continue. Then—even if your Android device shows that the process is complete—leave both devices alone until the loading bar that appears on your iOS device finishes. Keep your devices near each other and plugged in to power until the transfer completes. The whole transfer can take a while, depending on how much content you're moving. Here's what gets transferred: contacts, message history, camera photos and videos, photo albums, files and folders, accessibility settings, display settings, web bookmarks, mail accounts, WhatsApp messages and media, and calendars. If they're available on both
Google Play and the App Store, some of your free apps will also transfer. After the transfer completes, you can download any free apps that were matched from the App Store.

Set up your iOS device
After the loading bar finishes on your iOS device, tap Done on your Android device. Then tap Continue on your iOS device and follow the onscreen steps to finish setup for your iOS device.

Finish up
Make sure that all of your content transferred. Music, books, and PDFs need to be moved over manually. Need to get the apps that were on your Android device? Go to the App Store on your iOS device to download them.
If you need help with the transfer

- Make sure that you leave both devices alone until the transfer finishes. For example, on your Android device, the Move to iOS app should stay onscreen the whole time. If you use another app or get a phone call on your Android before the transfer finishes, your content won't transfer.
- On your Android device, turn off apps or settings that might affect your Wi-Fi connection, like the Sprint Connections Optimizer or the Smart Network Switch. Then find Wi-Fi in Settings, touch and hold each known network, and forget the network. Then try the transfer again.
- Restart both of your devices and try again.
- On your Android device, turn off your cellular data connection. Then try the transfer again.

If you need help after the transfer

- Get help if Messages doesn't work as expected after you transfer your content.
- If you don't see apps from your Android device on your new iOS device, find and download them in the App Store on your new device.
- You might find that only some content transferred and your iOS device ran out of space, or your iOS device might appear full even though the transfer didn't finish. If so, erase your iOS device and start the transfer again. Make sure that your Android content doesn't exceed the available space on your iOS device.
