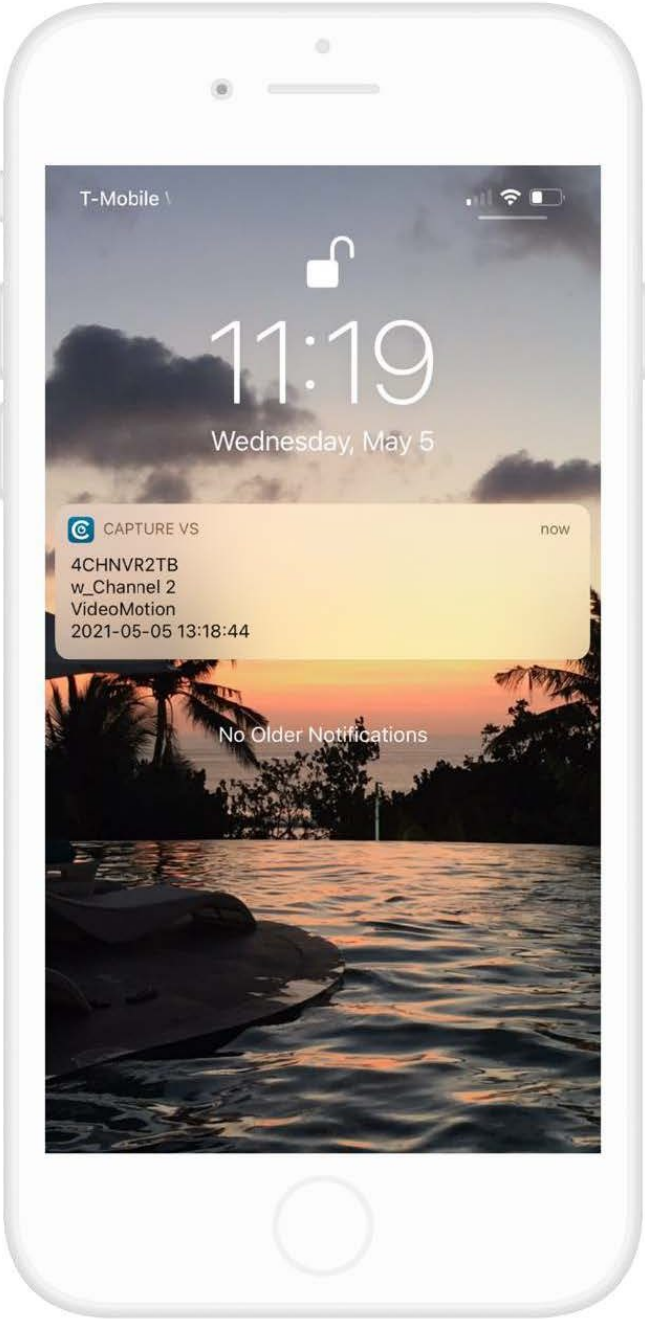
Capture VS Apps



Summary

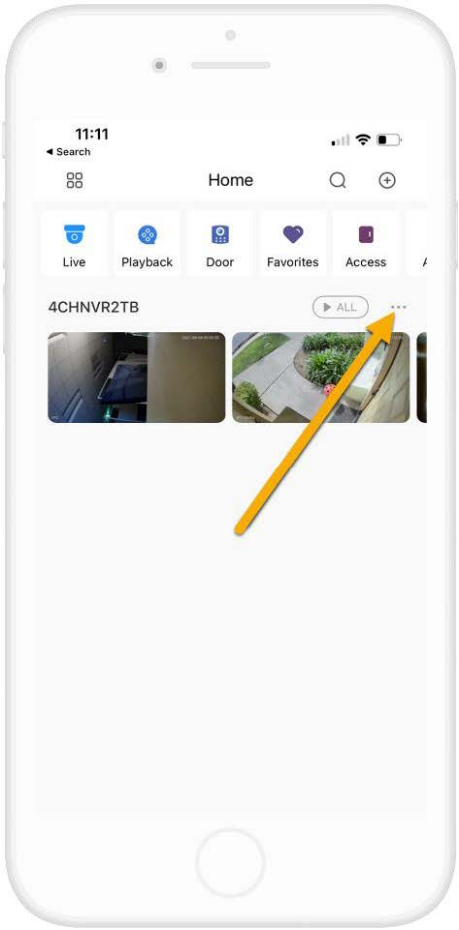
This guide will show how to enable push notifications from Capture VS App.

Requirments

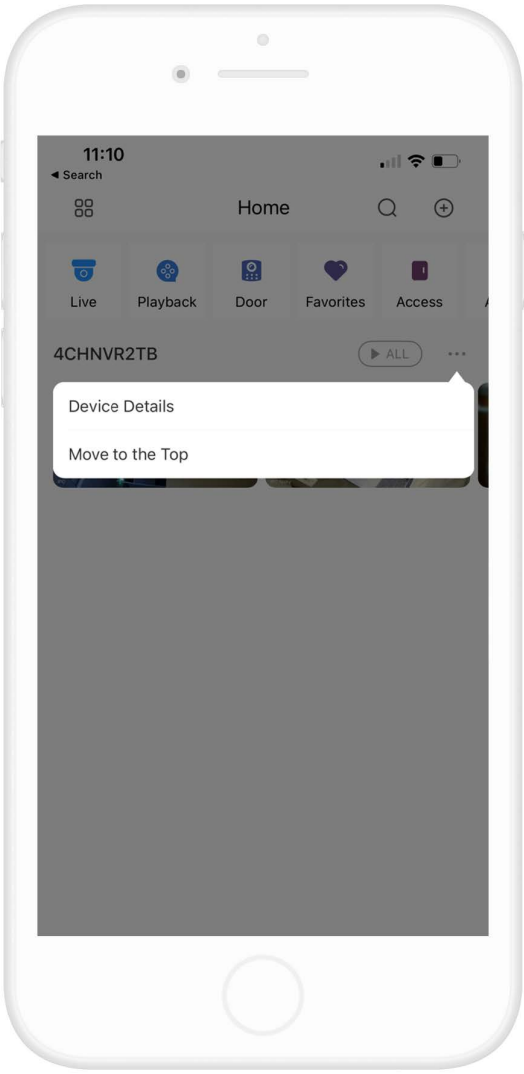
- Capture device initialized and set up on a network
- Device added to Capture VS App

Instructions

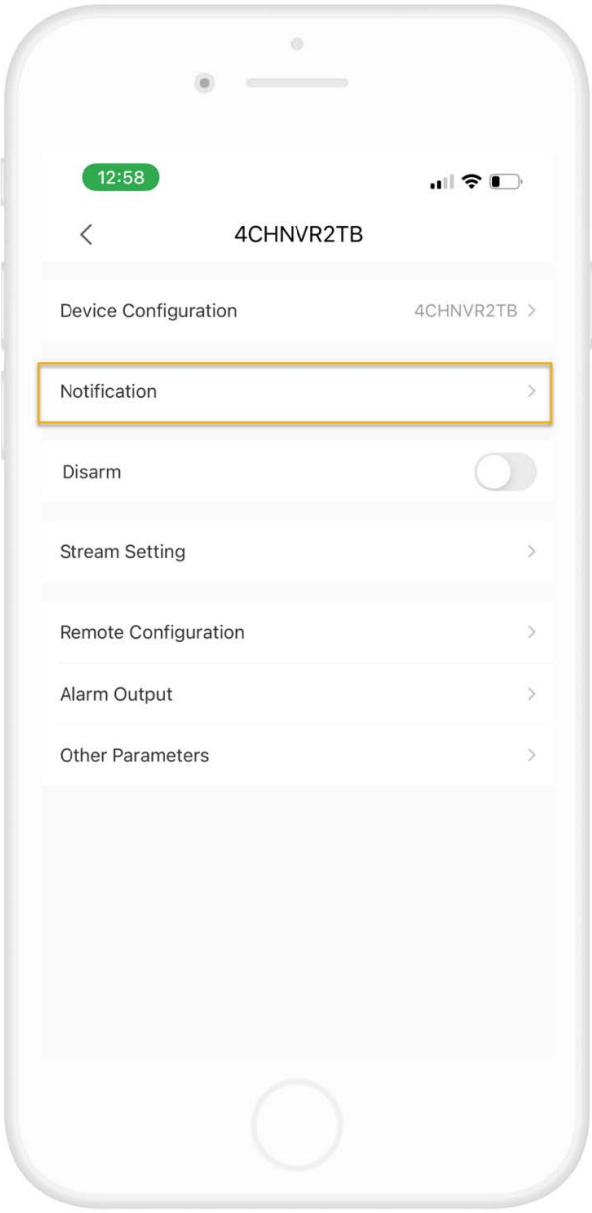
1. Open Capture VS App. Under Home menu, you will see Capture device that has been added.



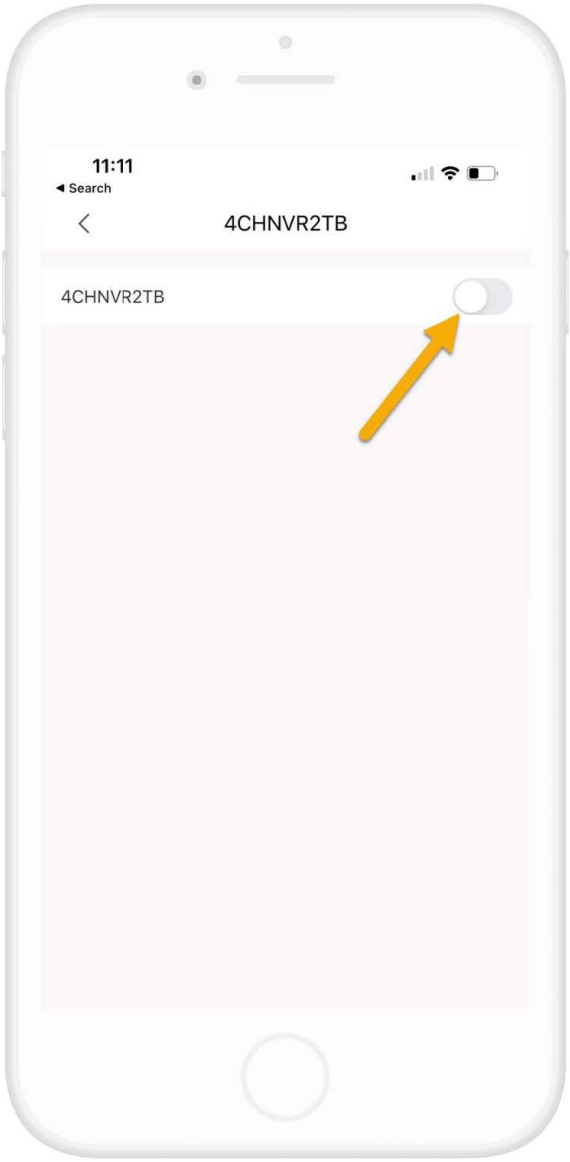
2. Tap on the ··· icon, and then select Device Details.



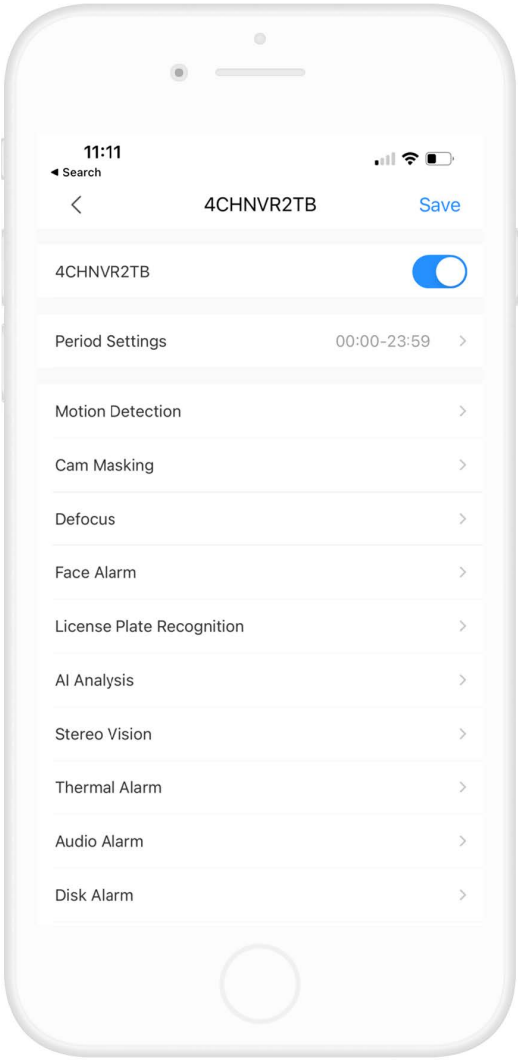
3. Tap Notification



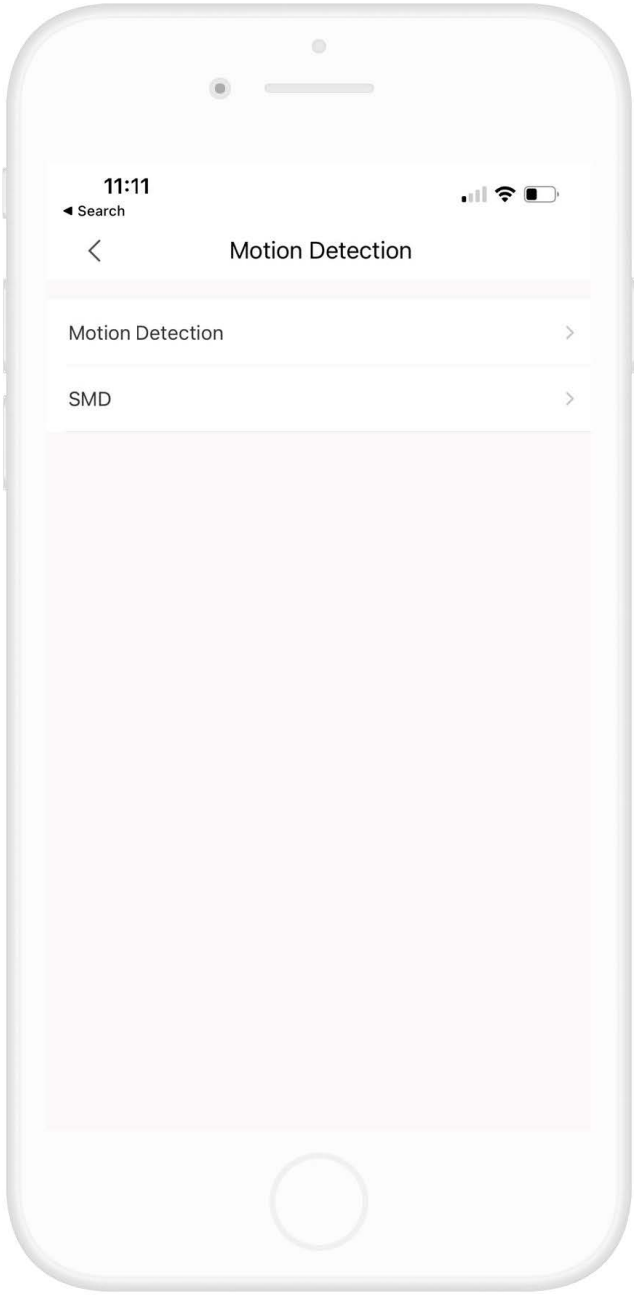
4. Tap the toggle to enable Notification for the recorder.



5. Select the notification type you wish to receive. In this article, we select Motion Detection.



6. There are two type of Motion Detection, regular Motion Detection and Smart Motion Detection. In this article, we select regular Motion Detection.



7. Select the channel you wish to receive notification when motion triggered. Then Tap on < icon twice to return to the previous menu.
