**ASCENDICE Floating Dice The Shop of Many Thing**

## Specifications

- Magnetic levitation dice
- Includes base protector
- Spherical neodymium core
- High-quality electronic components

## Product Usage Instructions

### Setting up Ascendice

1. Scan the QR code provided in the user manual for a video set-up guide.
2. Mounting Ascendice involves feeling the reaction of the die to the magnetic fields and locating the sweet spot.
3. Use the base protector to help you centre the die.
4. With a little practice, you'll quickly develop a feel for the process.

### Using Ascendice

- Ascendice is designed for fair and unbiased rolls.
- The rattling sound produced by the d20 is normal and intentional.
- The freely moving neodymium core inside the die ensures easy mounting, stable levitation, and fair rolls.
- While the floating d20 creates a stunning visual effect, it is recommended not to roll it while floating.
- External forces can disrupt the levitation, causing the die to fall.
- For a true and fair roll, lift the d20 off the base, roll it as you would normally, and then place it back on the base for display.
- The Ascendice base may make small adjustments in the electronics while mounting, but it operates silently otherwise.
- You can leave Ascendice powered on as the base is made from high-quality electronic components that can withstand continuous use.

## Frequently Asked Questions (FAQ)

- **Q: Should the d20 rattle?**

A: Yes, the rattling is normal and intentional. The freely moving neodymium core inside the die is a crucial design element, ensuring easy mounting, stable levitation, and fair, unbiased rolls.

- **Q: Is the d20 balanced for fair rolls?**

A: Absolutely! We've meticulously encapsulated a spherical neodymium core right at the center of the d20. This ensures perfect balance, making it as fair and unbiased as any high-quality rolling die.

- **Q: Can the d20 be rolled while it's floating?**

A: While the floating d20 creates a stunning visual effect, magnetic levitation is a fine-tuned technology. External forces can disrupt the levitation, causing the die to fall. It's possible to gently flick the d20 while it's floating for a pseudo-roll. For a true and fair roll, we recommend lifting the d20 off the base, rolling it as you would normally, and then placing it back on the base for display.

- **Q: Should the base make any noise?**

A: You may hear small adjustments in the electronics, especially while mounting your Ascendice. Otherwise, the base will operate silently.

- **Q: Can I leave Ascendice powered on?**

A: Yes! The Ascendice base is made from the highest quality electronic components and can withstand years of continuous use.

## Setting up

### The Dice

Give your Ascendice a good shake to ensure the Neodymium Core is free to move.

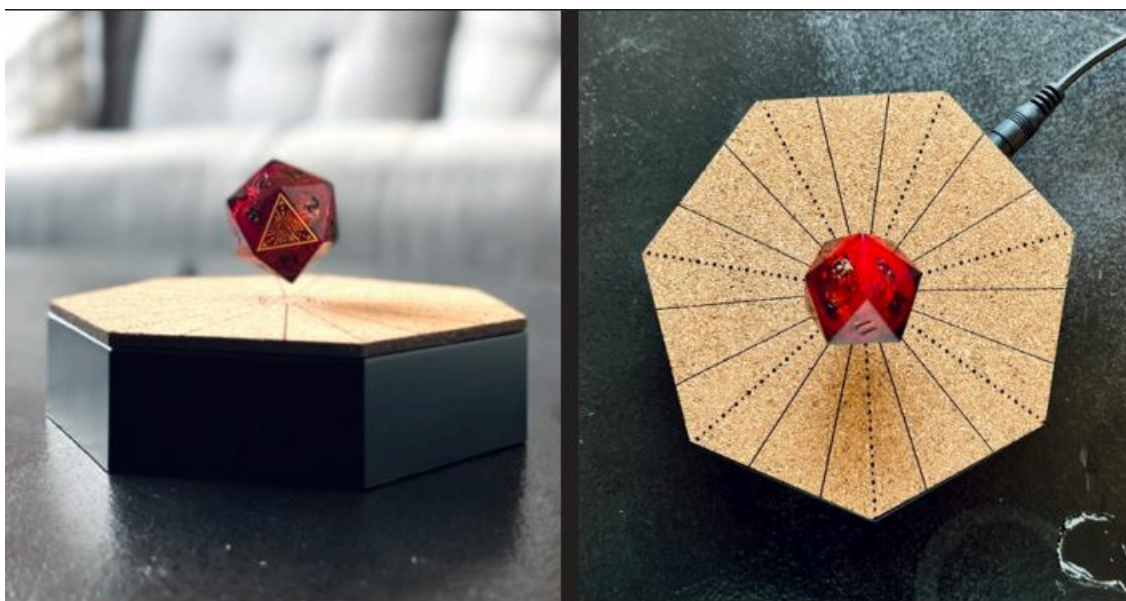

### Power

- **a.** Plug the AC/DC adapter into a power outlet, ensuring the indicator light turns on
- **b.** Firmly press the other end of the adapter into the base.

## Mounting

- **a.** Use the included base protector while you practice mounting your Ascendice to keep the die and base pristine.
- **b.** Align the d20 in the centre of the base, about 1 cm or 1/2 inch above the base, and gently release.

Mounting Ascendice involves feeling the reaction of the die to the magnetic fields and locating the sweet spot. Use the base protector to help you centre the die and with a little practice, you'll quickly develop a feel for the process.

## WIN NEW ASCENDICE DESIGNS

New Ascendice designs are coming and here's your chance to get them for free!

#### How to enter:

Post a video of your Ascendice with #Ascendice and mention @theshopofmanythings to be entered.

Each post counts as a new entry.

Good luck!
