How to Play Sudoku

Basic Rules of Sudoku

Sudoku is a logic-based number-placement puzzle. The objective is to fill a 9x9 grid with digits so that each column, each row, and each of the nine 3x3 subgrids (also called "boxes" or "blocks") contains all of the digits from 1 to 9.

- Each digit (1-9) must appear exactly once in each row.
- Each digit (1-9) must appear exactly once in each column.
- Each digit (1-9) must appear exactly once in each of the nine 3x3 subgrids.

Solving Techniques

The "Master Sudoku" book introduces various techniques to help you solve puzzles efficiently. These include:

- **Scanning:** Looking for numbers that can only fit in one specific cell within a row, column, or 3x3 box.
- **Cross-hatching:** Using the presence of a number in one row/column to eliminate possibilities in another intersecting row/column within a 3x3 box.
- **Candidate Elimination:** Marking potential numbers for each empty cell and eliminating candidates as you fill in numbers.

Refer to the dedicated instruction sections within the book for detailed explanations and examples of these and other advanced strategies.

To ensure the longevity of your "Master Sudoku" book, please follow these guidelines:
