Safety precautions when working on fuel supply

Caution!

Observe the following for all installations, especially in engine compartment due to lack of room:

- Route lines of all types (e.g. for fuel, hydraulic, EVAP, condenser systems, coolant and refrigerant, brake fluid, vacuum) and electrical wiring so that the original path is followed.
- To prevent damage to the lines, make sure there is sufficient clearance to all moving or hot components.

Always observe the following when removing and installing fuel gauge sensor or Fuel Pump (FP) from full or partially filled fuel tanks:

- Before starting work, switch on exhaust extraction system and place an extraction hose close to the installation opening of fuel tank to extract escaping fuel fumes. If shop exhaust system is not available, a fan (motor located outside of the air flow) with an air flow rate of at least 15 m³/h can be used.
- Prevent gasoline from contacting skin! Wear fuel-resistant gloves!
