Apple at Work A Smart Investment

Apple products make sound financial sense for your business.

Durable by design.
Throughout your device's life cycle, so we design our products with durable materials, support them with ongoing operating system updates, and make them easy to get replaced if anything happens.

Apple products are built to last. For example, iPhone 11 Pro and iPhone 11 Pro Max have a rating of IP68 for dust and water resistance (up to 2 meters/6.6 feet), which means the devices can withstand being submerged to a depth of 2 meters for up to 30 minutes.

In our Reliability Testing Lab, we simulate real-world conditions to enhance the durability of our designs. We test the ability to withstand mechanical stresses, such as sudden impact with a hard surface. In shock tests, we test our devices in extreme heat and cold, dry and humid conditions, and stress our exposure. Our chemical assembly tests evaluate the ability of devices to stand up to accidental spills like coffee, soap, sunscreen, or ketchup. We often go beyond international standards, and sometimes even create our own.

With these tests, we intentionally push our products beyond their limits so we can study what happens. We then use data to refine our designs, such as CT screens and electron microscopes, to thoroughly understand the impact of these tests on our devices. This information flows back to our designers and engineers to enable further durability improvements. We repeat this cycle through our product development process until our products meet our rigorous performance standards.
