Brita Faucet Mount Water Filtration System User Manual

Model: TU_25747

INTRODUCTION

This manual provides comprehensive instructions for the installation, operation, and maintenance of your Brita Complete On Tap Faucet Water Filtration System. This system is designed to filter tap water, reducing impurities and improving taste directly from your faucet. Please read this manual thoroughly before installation and use to ensure proper function and longevity of your product.

SAFETY INFORMATION

Always adhere to the following safety guidelines to prevent injury or damage to the product:

- Do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system.
- This system is designed for use with municipal tap water or well water that has been tested and deemed safe.
- Ensure all connections are secure to prevent leaks.
- Do not expose the system to freezing temperatures.
- Keep out of reach of children.
- This model does not fit pull-out or spray-style faucets. Verify your faucet type before installation.

SETUP AND INSTALLATION

Follow these steps to install your Brita Faucet Mount Water Filtration System:

1. **Prepare Your Faucet:** Unscrew the aerator from your faucet. If your faucet threads are on the outside, you may attempt to attach the system directly. If your faucet has threads on the inside, you will need to use one of the provided adapters.
2. **Attach Base System:** Securely attach the base system to your faucet. Ensure a tight fit to prevent leaks.
3. **Insert Filter Cartridge:** Insert the filter cartridge into the filter cup of the system.
4. **Flush New Filter:** Flush the new filter cartridge with cold water for 5 minutes. This conditions the filter and removes any carbon fines. The 100-gallon filter life begins after this 5-minute conditioning period.

The system fits standard 55/64" size faucets and includes adaptors for 13/16" and 15/16" sizes. No tools are typically required for installation.

Your Brita Faucet Mount System offers convenient access to filtered water and multiple spray options:

- **Filtered Water:** To dispense filtered water, rotate the selector lever to the filtered water position. Water will flow through the filter, reducing lead, chlorine (taste and odor), asbestos, and other contaminants.
- **Unfiltered Water:** For regular tap water, rotate the selector lever to the unfiltered water position. Water will bypass the filter.
- **Unfiltered Spray:** For a wider spray of unfiltered water, rotate the selector lever to the unfiltered spray position. This is ideal for washing dishes or rinsing.

Your Home Faucet With 3-Way Function

Filtered Water

Unfiltered Water

Unfiltered Spray

Electronic Filter Indicator

The system features a built-in electronic filter indicator that automatically signals when it's time to replace the filter. This indicator changes color to provide a visual cue:

- **Green Light:** Filter is in good condition.
- **Yellow Light:** Filter needs to be replaced soon.

- **Red Light:** Filter needs to be changed immediately.

Electronic Filter Indicator

Automatically lets you know when it's time to change the filter.

Good Replace soon Change

Each filter for the Brita® Faucet Filtration system lasts approximately 100 gallons or 4 months, whichever comes first.

MAINTENANCE

Filter Replacement

It is recommended to replace your Brita faucet-mount water filter every 100 gallons or approximately every four months, whichever comes first, to ensure optimal performance and water quality. The electronic filter indicator will guide you on when to replace it.

To replace the filter:

1. Remove the old filter cartridge from the system.
2. Insert a new Brita replacement filter cartridge.
3. Flush the new filter with cold water for 5 minutes as per initial setup instructions.

General Care

Clean the exterior of the system periodically with a damp cloth. Do not use abrasive cleaners or solvents, as these can damage the finish.

TROUBLESHOOTING

If you encounter issues with your Brita Faucet Mount Water Filtration System, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Water is leaking from the system.	Loose connection to faucet; improperly seated filter; damaged O-ring.	Ensure the system is tightly screwed onto the faucet. Remove and re-insert the filter cartridge, ensuring it is seated correctly. Check O-rings for damage and replace if necessary.
Filtered water flow is slow.	Filter cartridge is clogged or nearing end of life.	Check the electronic filter indicator. If yellow or red, replace the filter cartridge.
Water taste or odor has not improved.	Filter cartridge is expired or not properly flushed.	Replace the filter cartridge and ensure it is flushed with cold water for 5 minutes after installation.
System does not fit faucet.	Incompatible faucet type (pull-out/spray style) or incorrect adapter used.	Verify your faucet type. This system is not compatible with pull-out or spray-style faucets. Try different adapters provided.

SPECIFICATIONS

Feature	Detail
Model Name	On Tap Filter System
Item Model Number	TU_25747
Brand	Brita
Product Dimensions	6"L x 2.38"W x 8.25"H
Item Weight	27.22 g (0.96 ounces)
Installation Type	Countertop (Faucet Mount)
Filter Life	Approximately 100 gallons or 4 months
Special Feature	Electronic Filter Change Indicator
Contaminant Reduction	Reduces 99% of Lead, Chlorine (taste and odor), Asbestos, Sediment, TTHM, Benzene, TCE, Toxaphene. Also reduces microplastics.
UPC	060258422016
