SETUP

Unpacking Your Vinyl

1. Carefully remove the vinyl record from its outer sleeve and inner dust jacket. Handle the record by its edges or the label to avoid touching the grooves.
2. Inspect the record for any visible dust or debris.

Placing on Turntable

1. Ensure your turntable platter is clean and free of dust.
2. Gently place the record onto the turntable spindle, aligning the center hole.
3. If your turntable has a slipmat, ensure it is properly positioned before placing the record.

OPERATING

Playing the Record

1. Power on your turntable and amplifier/receiver.
2. Set the turntable speed to 33 1/3 RPM.
3. Carefully lift the tonearm and position the stylus over the lead-in groove at the edge of the record.
4. Gently lower the tonearm onto the record. The music will begin to play.
5. To stop playback, gently lift the tonearm and return it to its rest.

MAINTENANCE

Cleaning Your Record

Regular cleaning helps preserve sound quality and extend the life of your vinyl.

- Use a dedicated carbon fiber brush before each play to remove surface dust. Brush gently along the grooves.
- For deeper cleaning, use a record cleaning solution and a microfiber cloth, wiping in a circular motion along the grooves.
- Avoid using harsh chemicals or abrasive materials.

Storage

Proper storage is crucial to prevent warping and damage.

- Store records vertically in a cool, dry place away from direct sunlight or heat sources.
- Keep records in their original sleeves, preferably with an anti-static inner sleeve.

- Avoid stacking records horizontally for extended periods.

TROUBLESHOOTING

- **Skipping or Sticking:**

Check the record for dust or debris in the grooves. Clean the record thoroughly. Ensure your turntable is level and the tonearm's tracking force and anti-skate settings are correctly calibrated according to your turntable's manual.

- **Excessive Surface Noise/Pops:**

This can be caused by dust, static, or minor scratches. Clean the record. Use an anti-static brush or mat. If the noise persists, the record may have sustained damage.

- **Warping:**

Warping is usually caused by improper storage or exposure to heat. Ensure records are stored vertically in a stable environment. Minor warps may sometimes be mitigated with specialized flattening devices, but severe warps can permanently affect playback.
