## 2. Battery Care

Remove batteries if the camera will not be used for an extended period to prevent leakage. Use high-quality rechargeable batteries for cost-effectiveness and environmental benefits.

## 3. General Cleaning

Wipe the camera body with a soft, dry cloth. Avoid using harsh chemicals or solvents. For stubborn dirt, slightly dampen the cloth with water. Do not immerse the camera in water as it is not water-resistant.

## TROUBLESHOOTING

- **Camera Not Powering On:**
  Check that batteries are correctly inserted and fully charged. If using an SD card, ensure it is properly seated. Try new batteries if current ones are depleted.

- **Blurry Photos:**
  Ensure the camera is held steady during shooting. Use the autofocus feature by pressing the shutter button halfway before fully pressing it. Check lighting conditions; low light can lead to slower shutter speeds and blur. Digital zoom can also result in lower quality images compared to optical zoom.

- **Lens Cap Issues:**
  Ensure the lens cap is securely attached when not in use. If it frequently detaches, inspect for any physical damage to the cap or lens housing.

- **Dark Indoor Shots:**
  Utilize the built-in flash in appropriate modes (e.g., On/Fill flash). Ensure sufficient ambient lighting. Adjust white balance settings if available in the camera menu.

- **Video Rotation Issues:**
  Some users have reported videos rotating 90 degrees. This may be a software-related issue during playback or transfer. Check for updated Kodak EasyShare software or use video editing software to correct orientation.
