USING YOUR DVD+RW DISCS

1. Recording Data

1. Ensure your DVD drive is compatible with DVD+RW media.
2. Insert a blank Verbatim DVD+RW disc into your computer's DVD writer.
3. Follow the instructions of your burning software to select the files you wish to record.
4. Initiate the burning process. The disc will be formatted and data written to it.

2. Rewriting Data

One of the primary advantages of DVD+RW discs is their rewritability. To erase or rewrite data:

1. Insert the recorded DVD+RW disc into your compatible DVD writer.

2. Use your burning software to select the option to erase the disc or overwrite existing data.

3. Once the disc is erased, you can record new data onto it as described in the 'Recording Data' section.

3. Data Backup Best Practices (3-2-1 Rule)

For critical data, Verbatim recommends following the 3-2-1 backup rule:

- **3 Copies:** Maintain at least three copies of your data.
- **2 Types of Media:** Store your copies on at least two different types of storage media (e.g., hard drive and DVD+RW).
- **1 Offsite Copy:** Keep at least one backup copy in an offsite location.

CARE AND MAINTENANCE

- Handle discs by the edges to avoid fingerprints on the recording surface.
- Store discs in their original spindle or jewel cases to protect them from dust, scratches, and direct sunlight.
- Clean discs with a soft, lint-free cloth, wiping from the center outwards. Do not use abrasive materials or solvents.
- Avoid bending or flexing the discs, as this can cause permanent damage.

TROUBLESHOOTING

- **Disc not recognized:** Ensure the disc is inserted correctly and your drive supports DVD+RW format. Update your drive's firmware if necessary.
- **Burning errors:** Try reducing the write speed in your burning software. Ensure there are no background processes consuming system resources. Check the disc for visible damage.
- **Playback issues:** Verify that your playback device is compatible with DVD+RW discs. Some older DVD players may not support this format.
