2. **Position the Fruit:** Place one half of the citrus fruit into the lower juicing bowl, with the cut side facing down towards the holes.

7. Troubleshooting

Problem	Possible Cause	Solution
Low juice yield	Fruit not cut correctly or too large; insufficient pressure applied.	Ensure fruit is cut in half and placed cut-side down. Apply firm, steady pressure. For larger fruits, consider cutting into smaller wedges.
Seeds or pulp in juice	Fruit not positioned correctly; holes are clogged.	Verify the cut side of the fruit is facing the holes. Clean the holes if clogged.
Squeezer feels stiff	Residue buildup in hinge; lack of lubrication.	Clean the hinge area thoroughly. A small amount of food-grade mineral oil can be applied to the hinge if needed.
