

SKYLINK SC-1000

Skylink SC-1000 Complete Wireless Alarm System User Manual

Model: **SC-1000** | Brand: **SKYLINK**

1. INTRODUCTION

The Skylink SC-1000 Complete Wireless Alarm System is designed to provide comprehensive security for homes, offices, and businesses. Utilizing advanced rolling-code technology, this system offers enhanced security and minimizes false alarms. It is a do-it-yourself system, eliminating the need for recurring monitoring fees.

This manual provides detailed instructions for the installation, operation, and maintenance of your SC-1000 alarm system, ensuring optimal performance and reliable protection.

2. WHAT'S IN THE BOX

Upon unpacking your Skylink SC-1000 system, verify that all components listed below are present:

- Alarm with Control Panel (SC-001)
- One Motion Sensor (PS-434A)
- Two Door/Window Sensors (WT-433)
- One Keychain Transmitter (4B-434)
- One Emergency Dialer (AD-433S)
- Two AC Adapters
- Three 9-volt Alkaline Batteries
- Three 12-volt Alkaline Batteries
- Phone Line
- Instruction Manual (this document)
- Warranty Card

3. PRODUCT OVERVIEW AND COMPONENTS

The Skylink SC-1000 system comprises several key components that work together to provide comprehensive security. Below is an illustration of the main components included in your system:

Figure 3.1: Main components of the Skylink SC-1000 Wireless Alarm System. From top left, clockwise: SC-001 Control Panel, WT-433 Door/Window Sensors, AD-433S Emergency Dialer, 4B-434 Keychain Transmitter, PS-434A Motion Sensor.

3.1. SC-001 Control Panel

The central unit of the alarm system, featuring a keypad for arming/disarming, status indicators (AC Power, Low Battery, Arm), and mode selection (Chime, Delay, Instant). It communicates wirelessly with all sensors.

3.2. WT-433 Door/Window Sensors

These two-piece sensors are designed to detect the opening of doors or windows. When the magnetic contact is broken, a signal is sent to the control panel, triggering the alarm if the system is armed.

3.3. PS-434A Motion Sensor

A passive infrared (PIR) sensor that detects movement within its detection zone. Ideal for protecting larger areas, it triggers the alarm upon detecting unauthorized motion when the system is armed.

3.4. 4B-434 Keychain Transmitter

A portable remote control for convenient arming and disarming of the system. It allows users to control the alarm without needing to access the main control panel keypad.

3.5. AD-433S Emergency Dialer

This unit automatically dials pre-programmed phone numbers and plays a recorded emergency message when the alarm is triggered. It acts as your personal monitoring center without any monthly fees.

4. SETUP AND INSTALLATION

The SC-1000 system is designed for easy do-it-yourself installation. Follow these steps carefully to set up your alarm system.

4.1. Initial Power-Up

1. **Control Panel (SC-001):** Insert the 9-volt alkaline battery into the battery compartment. Connect the AC adapter to the control panel and plug it into a standard wall outlet. The "AC.PWR" indicator should illuminate.
2. **Emergency Dialer (AD-433S):** Insert the 9-volt alkaline battery. Connect the AC adapter and plug it into a standard wall outlet. Connect the provided phone line from the dialer to your telephone wall jack.
3. **Sensors (WT-433, PS-434A):** Insert the appropriate batteries (12-volt alkaline) into each sensor as per their individual instructions.

4.2. Sensor Pairing and Placement

Each sensor must be wirelessly linked to the control panel. Refer to the specific instructions for each sensor type for detailed pairing procedures. Once paired, strategically place your sensors:

- **Door/Window Sensors:** Mount one part on the door/window frame and the other on the moving door/window, ensuring they are aligned and within 1/2 inch of each other when closed.
- **Motion Sensor:** Place in a corner or elevated position to cover the desired area, avoiding direct sunlight or heat sources that could cause false alarms.

4.3. Programming the Emergency Dialer (AD-433S)

The emergency dialer can call up to nine different phone numbers and play a personalized 40-second message.

1. **Record Message:** Follow the dialer's instructions to record your emergency message. Ensure it clearly states the situation and requests help.
2. **Program Phone Numbers:** Enter up to nine contact numbers (e.g., cellular phone, pager, doctor, relatives, friends, neighbors) into the dialer's memory. The dialer will call these numbers in sequence until the message is acknowledged.

5. OPERATION

Understanding how to arm, disarm, and manage your alarm system is crucial for effective security.

5.1. Arming and Disarming the System

- **To Arm:** Enter your personal security code on the SC-001 control panel keypad or press the arm button on the keychain transmitter. The "ARM" indicator will illuminate.
- **To Disarm:** Enter your personal security code on the SC-001 control panel keypad or press the disarm button on the keychain transmitter. The "ARM" indicator will turn off.

5.2. System Modes

The SC-001 control panel offers different modes to suit your security needs:

- **Chime Mode:** When enabled, sensors will produce a chime sound when triggered, without activating the full alarm. Useful for knowing when a door or window is opened.
- **Instant Mode:** Any triggered sensor will immediately activate the alarm siren.
- **Delay Mode:** Provides a pre-set entry/exit delay time, allowing users to arm/disarm the system without triggering the alarm immediately upon entering or exiting.

5.3. Emergency Call Process

If any armed sensor is triggered, the following sequence occurs:

1. The 110dB siren will sound loudly.
2. The triggered sensor sends a wireless signal to the Emergency Dialer (AD-433S).
3. The AD-433S automatically dials the pre-programmed phone numbers in sequence.
4. Upon connection, your pre-recorded 40-second emergency message is played to the recipient.

6. MAINTENANCE

Regular maintenance ensures the longevity and reliability of your Skylink SC-1000 system.

6.1. Battery Replacement

- **Control Panel & Dialer:** The system runs on AC power with 9-volt alkaline battery backup. A "LO BATT" indicator on the control panel and dialer will illuminate when the battery needs replacement. Replace the 9V battery promptly to maintain backup power during outages.
- **Sensors:** Door/Window sensors and Motion sensors use 12-volt alkaline batteries. Replace them when their respective low battery indicators activate or when performance degrades.
- **Keychain Transmitter:** Replace the battery when the transmission range decreases or the indicator light fails to illuminate.

6.2. General Care

- Keep all components clean and free from dust. Use a soft, dry cloth for cleaning.
- Avoid exposing components to extreme temperatures, high humidity, or direct water contact.
- Test your system periodically (e.g., monthly) to ensure all sensors are functioning correctly and the dialer can successfully make calls. Inform your programmed contacts before conducting a test.

7. TROUBLESHOOTING

This section addresses common issues you might encounter with your Skylink SC-1000 system.

7.1. System Not Arming/Disarming

- Ensure the correct security code is entered.
- Check the batteries in the keychain transmitter if using it.
- Verify the control panel has power (AC.PWR indicator).

7.2. False Alarms

- **Motion Sensor:** Ensure it is not placed near heat sources (vents, direct sunlight) or in areas with pets that could trigger it. Adjust sensitivity if possible.
- **Door/Window Sensors:** Check that both parts of the sensor are securely mounted and not shifting, causing intermittent contact breaks.
- **Low Battery:** Replace batteries in sensors or the control panel if the "LO BATT" indicator is on.

7.3. Emergency Dialer Not Calling

- Verify the phone line is securely connected to both the dialer and the wall jack.

- Ensure the dialer has power (AC.PWR indicator) and a charged backup battery.
- Confirm that phone numbers are correctly programmed into the dialer.
- Test the dialer by manually triggering the alarm and listening for dial tone/calls.
- *Note:* If the phone line is cut or disconnected, the dialer cannot make calls.

7.4. Loud Beep on Arm/Disarm

The system is designed to emit a loud beep for confirmation. This is a normal operational characteristic. There is no setting to reduce this volume directly on the main unit.

8. SPECIFICATIONS

Feature	Detail
Brand	SKYLINK
Model Number	SC-1000
Color	White
Power Source	Battery Powered (with AC adapter)
Connectivity Technology	Wireless
Installation Type	Self-Adhesive
Alert Type	Motion, Entry/Exit
Item Weight	5.5 Pounds (total package)
Product Dimensions	2.5 x 10 x 9 inches
Batteries Required	1 x 9V (included), 3 x 12V (included)

9. WARRANTY AND SUPPORT

9.1. Warranty Information

The Skylink SC-1000 Complete Wireless Alarm System comes with a **1 Year Warranty** (Repair or Replace) from the date of purchase. Please retain your proof of purchase for warranty claims.

9.2. Customer Support

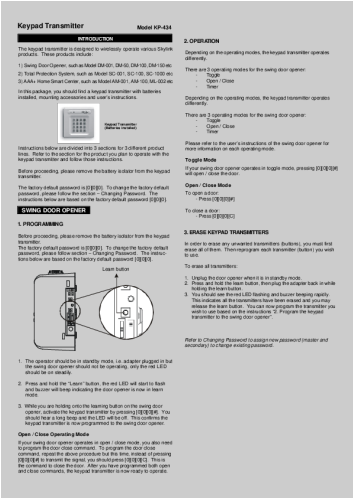

For technical assistance, troubleshooting, or warranty inquiries, please contact Skylink customer support. Refer to the warranty card included in your package for the most current contact information.

Additional resources, including a downloadable PDF user manual, may be available on the official Skylink website or through the retailer where the product was purchased.

ANNOUNCEMENT

Re: Temperature Sensor

Skylink's Temperature Sensor models TS-434/TS-433 and TS-101 were not clearly defined for different systems causing some compatibility issues. The following information states which sensors are compatible with the different Skylink systems.

The model TS-434/TS-433 is designed to work only with the Skylink security consoles SC-001, SC-100, SC-1000, AA-433, SC-10 and the Skylink dialer model AD-433S MS-2001.

The model TS-101 is designed to work only with the Skylink security consoles AA-001, AA-100, MA-001 and MA-100.

We will launch a newer model TS-101A soon that is compatible with models SC-001, SC-100, SC-1000, AA-433, SC-10, AA-001, AA-100, MA-001, MA-100 and the Skylink dialer model AD-433S MS-2001 to solve the compatibility issue. We will announce product information once TS-101A is launched in the market.

We apologize for any inconvenience this may have caused. Please contact our Sales at Tel/Fax: 1-800-304-1187 or e-mail announcements@skylink.com if you have any questions.

FAQ for SC-1000	
Q1:	What is SC-1000?
A1:	SC-1000 is the first complete, totally wireless alarm system that is easy to install, program and use.
Q2:	How much is the monthly monitoring fee?
A2:	None. The best part about owning the SC-1000 is that it is a self-monitoring center on its own. In the event of an emergency all monitoring companies do is make the call to the emergency services for you. The SC-1000 comes with an emergency phone dialer which in the event of an emergency will call up to 8 different numbers, and send your personal, up to 40 second long recorded messages to the person of your choice, thus, eliminating the need for a monitoring company and the costly monitoring fees.
Q3:	How hard is it to install, program and use the SC-1000?
A3:	At Skylink it is a make sure that all our products are the most user friendly. Our engineers spent a lot of time trying to make installing, programming and using our products very easy. The result is the SC-1000 that is a totally Do-It-Yourself, wireless system that does not need any hard wiring whatsoever. It comes pre-programmed at the factory so that you can just hook it up and start using it. You can also personalize that function if there is a need by going thru the clear and simple instructions in the user manual.
Q4:	How easy is it to add more sensors to the SC-1000?
A4:	This system is totally wireless. You can add as many sensors as you need, up to 24. All you need to do is learn each sensor to the control panel by pressing one button and it is ready to use.
Q5:	Why do I need a security system for my house?
A5:	Statistics from the Police Departments all over the world show that, homes with no electronic surveillance or security systems are more prone to getting robbed than homes with some form of security system. Skylink security systems are designed to work for you at a cost that can be easily be included in your budget. There is no monitoring fee involved so you do not have to keep paying an additional bill every month for a long, long time.
Q6:	Who do I call for help with installation, programming, trouble shooting, etc.?
A6:	Please call Toll Free 1-800-334-1187 in USA and Canada and 905-450-8883 from anywhere in the world and our customer service will call you back more than happy to answer any of your questions regarding installation, programming, etc., or send us your questions and comments at skylink@skylinkhome.com .

Skylink wireless alarm system SC-1001 now available at Fry's Electronics	
(Brampton, ONTARIO, Canada) May 22, 2010 - The Wireless Alarm System SC-1001, designed and manufactured by the Skylink Group - a leader in wireless technology is now available at Fry's Electronics's - a big box store and retailer of software, consumer electronics, computer hardware and household appliances with a chain of supercenters in US.	
"The selling of Skylink Wireless Alarm System by Fry's extends the popularity of this successful product line," said Philip Tsui, CEO of Skylink Technologies Inc. "It provides homeowners with a vital security package that is expandable and can easily be customized, and allows the homeowner to monitor the security of their home regardless of whether they are home or away."	
The wireless security system SC-1001 sold at Fry's can be installed in minutes. With the motion sensor and two-door/window sensors, the system covers enough area for a decent sized house. By adding the additional sensors, you can expand the system to monitor other locations in a home, business office, 24-hour store, etc., or wherever security is a concern. The emergency dialer is a one-touch monitoring system without any monthly charges. The Control Panel can control up to 30 different sensors, these sensors include door/window sensors, motion sensor, flood sensor, smoke sensor, temperature sensor, etc. If any of these sensors are triggered when the system is armed, the alarm will sound and it will send a wireless signal to the dialer which will call to help at same time. You can program the emergency dialer to call up to 8 different phone numbers including your own cellular phone, pager, your doctor, parents, friends, neighbors, etc. Once the recipient picks up the phone, the emergency dialer will play your pre-recorded message and inform the recipient that you are in an emergency situation and need help right away.	
The system SC-1001 comes with pack, SC-1000 is all box pack accessories: Audio Alarm (AA-433), Remote Keychain Transmitter (4B-434), Motion Sensor (PS-434) and Door/Window Sensor (WT-433) are also available at Fry's Electronics.	
About Fry's Electronics Fry's Electronics is a big box store and retailer of software, consumer electronics, computer hardware and household appliances with a chain of supercenters headquartered in Silicon Valley. It has more than 30 stores in different states and its online store at http://www.frys.com .	
About Skylink Skylink understands the needs and concerns of the homeowner in providing a safe haven and comfortable environment for their family. Established in 1998, Skylink has offices in Brampton, Ontario, Canada; Ontario City, California, U.S. and Hong Kong. R&D, Design, electronic design, software design, mechanical design and graphic design departments for new and existing product lines are housed in the Hong Kong offices. Skylink also owns a manufacturing facility in China. More information at http://www.skylinkhome.com .
