Schellenberg 58100

Schellenberg 58100 Aluminum Mosquito Net Instruction Manual

Model: 58100
Brand: Schellenberg

1. PRODUCT OVERVIEW

The SCHELLENBERG aluminum mosquito net is particularly robust and durable. It not only protects against insects and rodents but also resists scratches from dogs and cats. It is also UV-resistant and maintains its shape even in adverse weather conditions. The aluminum mosquito net is versatile and can be used, for example, for insect protection frame systems. Please note that mounting accessories must be ordered separately.

Key Features:

- Robust and weather-resistant fabric
- Protects doors and windows against flying insects and rodents
- Tear-resistant and UV-resistant, also suitable for dogs and cats
- Versatile use, e.g., for insect protection frame systems
- Dimensions: 100 x 250 cm

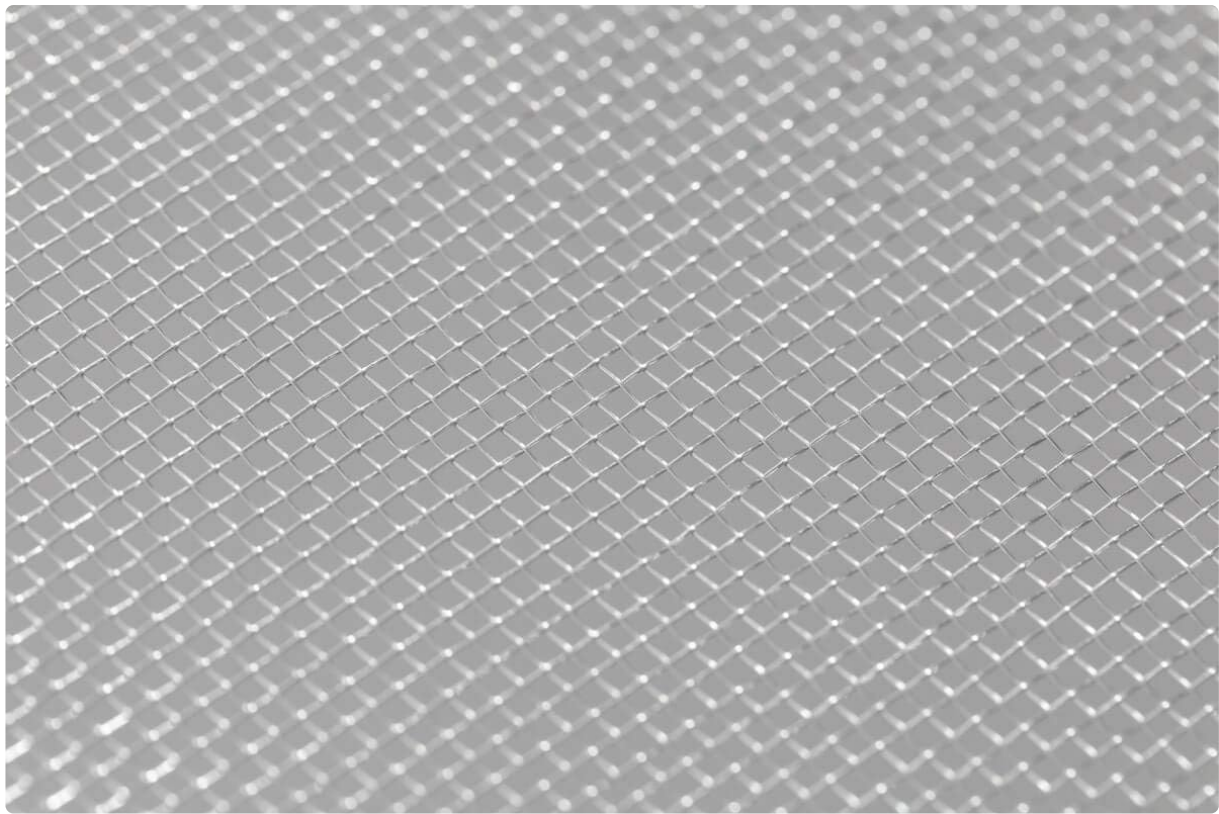

Image 1.2: A detailed view of the aluminum mesh, showcasing its fine, durable weave designed to block insects and resist damage.

2. SAFETY INSTRUCTIONS

- Always handle the mesh with care to avoid cuts from sharp edges. Consider wearing protective gloves during installation.
- Ensure the mesh is securely installed to prevent accidental detachment, especially in areas accessible to children or pets.
- Do not use this product for purposes other than its intended use as an insect and pet protection barrier.
- Keep out of reach of small children during installation to prevent choking hazards from small parts (if applicable to mounting accessories, which are sold separately).

3. SETUP AND INSTALLATION

The Schellenberg 58100 Aluminum Mosquito Net is designed for versatile use, primarily with insect protection frame systems. Please note that **mounting accessories are not included** with this product and must be purchased separately based on your specific application (e.g., frame type, window/door size).

General Installation Steps:

1. **Measure:** Carefully measure the dimensions of the frame or opening where the mosquito net will be installed.
2. **Cut:** Using appropriate cutting tools (e.g., heavy-duty scissors or tin snips), cut the aluminum mesh to the required size. Ensure clean, straight cuts.
3. **Secure:** Integrate the cut mesh into your chosen insect protection frame system. This typically involves stretching the mesh taut and securing it into the frame's channels using a spline roller and spline, or other fastening methods specific to your frame system.
4. **Trim:** Trim any excess mesh protruding from the frame for a neat and secure finish.

Image 3.1: Illustrative image showing hands carefully installing the mosquito net into a frame, emphasizing the need for precise fitting.

Image 3.2: A woman demonstrating the installation process of a mosquito net on a window, highlighting the ease of handling the material.

4. OPERATING THE PRODUCT

Once properly installed within a frame system, the Schellenberg 58100 Aluminum Mosquito Net operates as a passive barrier. It effectively prevents flying insects, crawling pests, and rodents from entering your living spaces while allowing air circulation. Its robust aluminum construction also provides a durable barrier against pet claws, making it suitable for households with cats and dogs.

5. MAINTENANCE

To ensure the longevity and effectiveness of your Schellenberg Aluminum Mosquito Net, follow these simple maintenance guidelines:

- **Cleaning:** Periodically clean the mesh with a soft brush or a damp cloth to remove dust, pollen, and debris. For stubborn dirt, a mild soap solution can be used, followed by rinsing with clean water. Avoid abrasive cleaners or harsh chemicals.
- **Inspection:** Regularly inspect the mesh for any signs of damage, such as tears, holes, or loose sections. Although the mesh is tear-resistant, extreme forces can cause damage.
- **Repair:** Small tears can often be repaired using specialized mesh repair kits or patches. For larger damage, replacement of the affected section or the entire mesh may be necessary.

6. TROUBLESHOOTING

Here are some common issues and their potential solutions:

- **Insects still entering:** Check for gaps around the edges of the installed mesh or small holes in the mesh itself. Ensure the frame system is properly sealed against the window or door frame.
- **Mesh appears loose or sagging:** This indicates improper tension during installation or a loose spline/fastening. Re-tension and re-secure the mesh within its frame.
- **Mesh is damaged:** For minor damage, consider a repair kit. For significant damage, the mesh may need to be replaced.

7. SPECIFICATIONS

Attribute	Value
Manufacturer	Alfred Schellenberg GmbH
Product Dimensions (L x W x H)	100 x 0.03 x 250 cm
Weight	340 grams
Reference / Model Number	58100 / 875210
Size	100x250cm
Color	Aluminum
