

Hunter NODE-400

Hunter Sprinkler Node400 4-Station Irrigation Controller User Manual

INTRODUCTION

Welcome to the user manual for the Hunter Node400 4-Station Irrigation Controller. This battery-powered controller is engineered for isolated sites and areas without traditional AC power, providing a reliable and efficient solution for automatic irrigation. Its robust, waterproof design ensures durability and consistent performance even in challenging valve box environments.

PRODUCT FEATURES

- Fixed 4-station capacity for managing multiple irrigation zones.
- Maximum station run time of 6 hours, suitable for various watering needs.
- Manual cycle operation for immediate watering control.
- Easy retrieve memory feature to restore previous programming settings.
- Powered by one or two 9V batteries, offering flexibility and extended power.
- Easy-to-program LCD screen for clear visibility and intuitive setup.
- Master valve control capability for enhanced system management.
- Standard Hunter controller programming with 3 independent programs and 4 start times per program.
- Waterproof exterior designed for secure installation within a valve box.

SETUP AND INSTALLATION

The Hunter Node400 is engineered for quick and straightforward installation, typically mounting directly onto a valve's solenoid. This design minimizes the need for additional tools like screws or drills, simplifying the setup process.

Components Overview

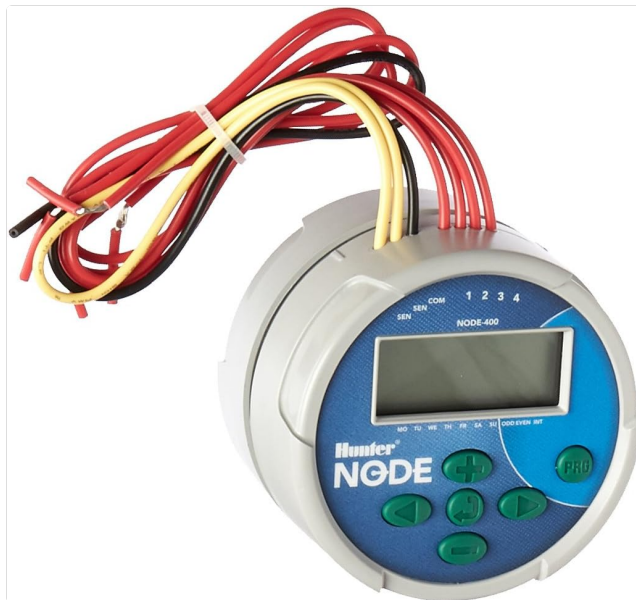

Image: Front view of the Hunter Node400 controller, displaying the LCD screen, control buttons, and the colored wiring harness for connecting to irrigation stations.

Battery Installation

1. Locate the battery compartment on the controller unit.
2. Insert one or two new 9V alkaline batteries, ensuring correct polarity as indicated inside the compartment. Using two batteries will extend the operational life of the controller.
3. Securely close the battery compartment cover to maintain the unit's waterproof seal.

Wiring Connections

1. Connect the common wire from your irrigation valves to the common terminal on the Node400, typically labeled 'COM'.
2. Connect the individual zone wires from your valves to the corresponding station terminals (1, 2, 3, 4) on the Node400.
3. If utilizing a rain sensor, connect its wires to the designated sensor terminals (SEN) on the controller.

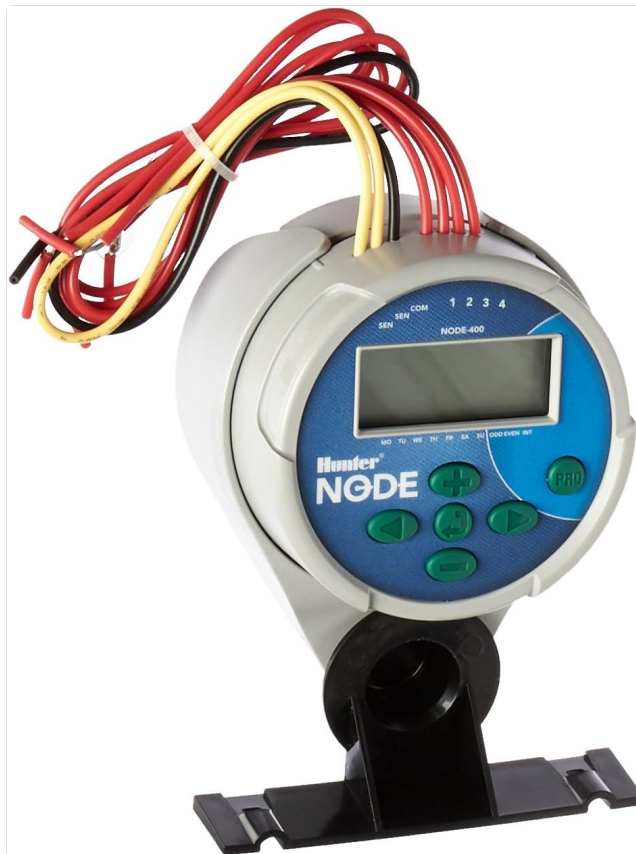

Image: Hunter Node400 controller shown with an optional mounting bracket, illustrating how the unit can be secured within a valve box for stable installation.

OPERATING INSTRUCTIONS

The Node400 features an intuitive LCD screen and a user-friendly push-button interface for all programming and operational adjustments.

Basic Programming Steps

1. Press the **PRG** button to enter the programming mode.
2. Use the arrow buttons (< and >) to navigate through various settings, including current time, start times, run times for each station, and specific watering days.
3. Adjust values using the + and - buttons.
4. The controller supports 3 independent programs (A, B, C) and allows for up to 4 start times per program.
5. Set your desired watering days, which can include specific days of the week, odd/even days, or interval watering cycles.
6. After setting each parameter, ensure you confirm the selection to save the changes.

Manual Operation

To initiate a watering cycle manually, press the dedicated manual cycle button. This button is typically indicated by a water droplet symbol or a 'Manual' label on the controller's interface. You can usually select a specific station to run or activate all stations for a predetermined duration.

MAINTENANCE

Battery Replacement

The Node400 operates on 9V batteries. For optimal performance and to prevent interruptions, it is recommended to check and replace the batteries annually or immediately when the low battery indicator appears on the LCD screen.

1. Open the battery compartment cover.
2. Carefully remove the old 9V batteries.
3. Insert new 9V alkaline batteries, ensuring correct polarity.
4. Close the battery compartment securely to maintain the waterproof integrity of the unit.

Image: Rear view of the Hunter Node400 controller with a black protective cap, highlighting its compact and sealed design which contributes to its durability in outdoor environments.

TROUBLESHOOTING

- **Controller Not Powering On:** Verify that the batteries are correctly installed and are fresh. Replace old batteries if necessary.
- **Stations Not Watering:** Double-check all programming settings, including start times, run times, and watering days. Inspect wiring connections to the valves for any disconnections or damage. Ensure the master valve, if used in your system, is functioning correctly.
- **Erratic Operation:** This can often be resolved by replacing the batteries. Also, ensure the controller's seals are intact and there is no moisture ingress into the unit.
- **Programming Difficulties:** If you encounter challenges with programming, refer to the detailed programming instructions available in the full product manual or on Hunter's official support resources. The 'easy retrieve memory' feature can be used to revert to previous settings if an error occurs during programming.

SPECIFICATIONS

Feature	Detail
Model	NODE-400
Stations	4
Power Source	1 or 2 x 9V Batteries

Feature	Detail
Max Station Run Time	6 hours
Programs	3 (A, B, C)
Start Times per Program	4
Product Dimensions	3.5 x 3.5 x 2.5 inches
Item Weight	1.63 pounds
Manufacturer	Hunter

WARRANTY AND SUPPORT

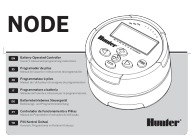

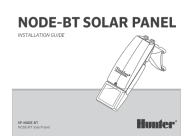

Warranty Information

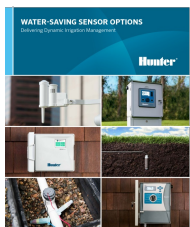

The Hunter Node400 Irrigation Controller is covered by a 2-year warranty period from the date of purchase. Please retain your original proof of purchase for any warranty claims.

Customer Support

For further assistance, access to detailed programming guides, or technical support, please visit the official Hunter Industries website or contact their customer service department directly.

Hunter Built on Innovation

SOLENOIDS

Heavy-duty Hunter 24 VAC or latching solenoids provides dependable control and long life performance.

Key Benefits

- Compatible with all Hunter irrigation valves
- Engineered with ultra-durable, heavy-duty materials for maximum longevity
- Pre-wired with 45 cm of valve-control wire
- Manual quarter turn on/off control
- Energy efficient, low-power design
- Stops water intrusion and protects critical electrical components
- Capable plunger offers easy opening of solenoid
- Easy installation with no tools required

Electrical Specifications

606800

- Maximum operating voltage: 24 VAC
- Minimum recommended voltage: 20 VAC
- Current: 2.0 A VAC
- 250 mA standby, 250 mA holding, 400 mA
- Maximum operating pressure: 0.7 bar, 100 kPa
- Wire leads: 45 cm of 5.8 mm² UL approved wire

NODE

Este programador estanco y alimentado por pilas ofrece control de riego automático para riego temporal y riego permanente.

VENTAJAS PRINCIPALES

- Regulación automática
- Programable estanco para riego temporal
- Indicador de tiempo de riego restante
- Control remoto de riego por radio de onda de radio
- Programable para riego de riego temporal y riego permanente
- La batería de riego puede ser reemplazada sin necesidad de herramientas
- El control remoto puede ser reemplazado sin necesidad de herramientas
- El control remoto puede ser reemplazado sin necesidad de herramientas

ESPECIFICACIONES DE FUNCIONAMIENTO

- Una hora de programación de 9 a 10 en un ciclo de 100 minutos de riego
- Control de riego de 10 a 100 minutos
- 100 mm de longitud máxima de cable, solo cable de 100 mm de longitud
- El control remoto puede ser reemplazado sin necesidad de herramientas
- La batería de riego puede ser reemplazada sin necesidad de herramientas
- El control remoto puede ser reemplazado sin necesidad de herramientas
- El control remoto puede ser reemplazado sin necesidad de herramientas

Hunter Built on Innovation

SOLENOIDS

Heavy-duty Hunter 24 VAC or latching solenoids provides dependable operation and long life performance.

Key Benefits

- Compatible with all Hunter irrigation valves
- Engineered with ultra-durable, heavy-duty materials for maximum longevity
- Pre-wired with 10' of valve control wire
- Manual quarter-turn on/off control
- Energy-efficient, low-power design
- Stops water intrusion and protects critical electrical components
- Captive plunger offers easy servicing of solenoid
- Easy installation with no tools required

Electrical Specifications

- 606800**
 - Maximum opening/closing voltage: 24 VAC
 - Maximum recommended voltage: 24 VAC
 - Current: 2.4 VAC
 - 500 mA max. 500 mA max. 500 mA
 - Maximum operating pressure: 200 PSI
 - Wire leads: 10' of 18 AWG in approved wire

- 452000**
 - Maximum opening/closing voltage: 12 VDC
 - Maximum recommended voltage: 12 VDC
 - Current: 4.8 A max. 4.8 A max.
 - Maximum operating pressure: 200 PSI
 - Wire leads: 10' of 18 AWG black and red in approved wire

24V AC Solenoid
Height: 2 1/2"
Width: 1 1/2"
Depth: 1"

12V DC Latching Solenoid
Height: 2 1/2"
Width: 1 1/2"
Depth: 1"

NODE

Hunter

Reliable Battery-Powered Control Without the Need of an Electrical Connection.

For remote sites, power-unavailable areas, or the special needs of crop circles, the Hunter Node is the smart, reliable solution. The Node connects to valves, solenoids quickly and easily, and without wires, ditches or additional valves. The Node's built-in battery and waterproof solenoid ensure it can handle the harshest environment of a valve box. Once placed in a valve box, the Node is operated by one or two 9V batteries, which provide standard or extended power throughout the season. Along with exceptional reliability, the Node features on-demand program LCD screen, the ability to control a Master Valve, and uses standard Hunter controller programming with 3 programs and 4 start times per program. The array of programming options and rugged reliability make the Node a superior, but powerful irrigation controller with the Reliability of Hunter power.

Features & Benefits

- Standard Hunter controller** - Hunter programming, on-site programming, 3 programs, 4 start times, Hendel Built on Innovation™	
SOLENOIDS	
Heavy-duty 14Vdc to 24 Vdc or 120Vdc solenoids provides dependable operation and long life performance.	
Key Benefits - Compatible with all heater irrigation valves. - Engineered with ultra-durable, heavy-duty materials for maximum longevity. - Priced under \$100 for a wide control mix. - Manual quarter turn on/off control.	
Electrical Specifications 800000 - Maximum operating/operating voltage: 18 VDC - Maximum recommended voltage: 24 VDC 1500 mA Inrush, 100 mA holding, 60 Hz - Maximum operating pressure: 120 PSI - Wire sizes: 12 or 16 AWG UL-approved wire 420000 - Maximum operating/operating voltage: 120 VDC - Maximum recommended voltage: 120 VAC 1.2 A Inrush, 0.2 A holding, 60 Hz - Maximum operating pressure: 200 PSI - Wire sizes: 12 or 16 AWG black and UL-approved white	
Type AC and DC Latching Solenoids	
 DC Latching Solenoid w/legs 24Vdc Durable™	
 AC Latching Solenoid w/legs 24VAC Durable™	

800-875-8289/875-8288

RESIDENTIAL & COMMERCIAL IRRIGATION | Durable™ Built on Innovation™

HUNTER®

WATERWISE™ A WATER-SAVING IRRIGATION SYSTEM Built on Innovation

NODE WITH SOLAR PANEL OPTION

Reliable Battery—Operated Control Without the Need of an Electrical Connection

The Node's solar disc and power controller module, the Hunter Node's smart, reliable solenoid valves. The Node reacts to a solar's ultraviolet rays automatically, and without wires, disk or without users. The unit's solid-state circuitry is waterproofed against removal or tampering. The back-investment of a solar kit. The Node is powered by one or two 10" batteries and provides a standard on-time program through the sensor. Along with exceptional reliability, the Node also allows you to program a CD series, the ability to activate a Master Valve, and learn standard four-course watering patterns with the flexibility of battery power.

3 programs and a set time per program. The option of engineering approval and rugged reliability make the Node a complete, full-power irrigation controller with the flexibility of battery power.

The Node's "optional Solar Panel Kit (CDS)H2O" allows the need for batteries and provides alternative three-quarterly watering the sun's energy. One connected, this device, highly efficient upgrade requires 100% of the conventional wiring, and eliminates the alternate. Three-quarterly watering.

- Q Versatile:** Models range from 6 to 60 minutes with auto-off feature.
- Q Water-Wise:** Cuts down to up to 12 feet of water.
- Q Main-Once-Per-Week:** Set the Solar Panel Kit for maintenance-free operation.

Learn More: Visit hunterirrigation.com/node for more detailed information.
