  - **4+4 Pin CPU Power:** Connect this cable to the CPU power connector on your motherboard.
  - **PCIe Power (if applicable):** If your graphics card requires additional power, connect the appropriate 6+2 pin PCIe power cables.
  - **SATA Power:** Connect SATA power cables to your hard drives, SSDs, and optical drives.
  - **Molex Power:** Connect Molex power cables to any peripherals that require them.
5. **Cable Management:** Route cables neatly to improve airflow and aesthetics within your case.
6. **Close Case:** Once all connections are secure, close your computer case.
7. **Final Connection:** Connect the AC power cord to the power supply and then plug it into a wall outlet.

## 6. OPERATING INSTRUCTIONS

---

After successful installation, follow these steps to operate your computer system with the new power supply:

1. Ensure the power switch on the rear of the power supply (refer to Figure 4.2) is in the 'ON' (I) position.
2. Press the power button on your computer case. The system should power on.
3. To power off your system, use the operating system's shutdown function. For a hard shutdown, press and hold the power button on your case. For complete power disconnection, switch the power supply to the 'OFF' (O) position and unplug the AC cord.

## 7. MAINTENANCE

---

Regular maintenance helps ensure the longevity and optimal performance of your power supply:

- **Dust Removal:** Periodically clean dust from the power supply's fan and ventilation grilles using compressed air. Ensure the system is powered off and unplugged before cleaning.
- **Cable Check:** Occasionally check that all power cables are securely connected to their respective components.
- **Environmental Conditions:** Operate the power supply in a clean, dry, and well-ventilated environment.

## 8. TROUBLESHOOTING

---

If you encounter issues with your power supply, refer to the following common troubleshooting steps:

- **No Power:**
  - Check if the AC power cord is securely plugged into both the wall outlet and the power supply.
  - Ensure the power switch on the rear of the power supply is in the 'ON' (I) position.
  - Verify that the main 20+4 pin ATX and 4+4 pin CPU power cables are correctly connected to the motherboard.

- Test the wall outlet with another device to ensure it has power.

- **System Instability/Random Shutdowns:**

- Ensure the power supply is adequately ventilated and not overheating.
- Check all power connections to components for looseness.
- If the issue persists, the power supply may be insufficient for your system's components or faulty. Consider testing with another known-good power supply if possible.

- **Loud Fan Noise:**

- Clean any dust accumulation from the fan blades and grille using compressed air.
- Ensure no cables are obstructing the fan's rotation.

If these steps do not resolve the issue, contact LC-Power customer support or a qualified technician.
