3.2 Motherboard Installation

1. Install the I/O Shield into the rear opening of your computer case.

2. Carefully align the motherboard with the standoffs in your case.
3. Secure the motherboard with screws, ensuring it is firmly seated.

3.3 CPU Installation

1. Open the CPU socket lever.
2. Align the CPU with the socket, ensuring the golden triangle on the CPU matches the triangle on the socket.
3. Gently place the CPU into the socket without forcing it.
4. Close the CPU socket lever to secure the CPU.
5. Apply thermal paste (if not pre-applied to cooler) and install the CPU cooler according to its manufacturer's instructions.

3.4 Memory Installation

1. Open the clips at both ends of the DIMM slot.
2. Align the notch on the DDR memory module with the key in the DIMM slot.
3. Insert the module firmly into the slot until the clips snap into place.
4. For dual-channel operation, install modules in matching colored slots (e.g., both blue or both black).

3.5 Expansion Card Installation

1. Remove the metal bracket cover from the desired expansion slot on your case.
2. Align the expansion card with the slot and press down firmly until it is fully seated.
