TROUBLESHOOTING

If you encounter any issues with your WMF Clever & More Wine Bottle Thermometer, please refer to the following common solutions:

- **No Temperature Display:**
 - Ensure the thermometer is securely clipped around the wine bottle and has full contact with the glass.
 - Allow sufficient time (at least one minute) for the temperature to stabilize and display.
 - Check if the ambient temperature is extremely high or low, which might affect the initial responsiveness of the heat-sensitive band.
- **Inaccurate Temperature Reading:**
 - Verify that the thermometer is positioned correctly on the bottle, making good contact.
 - Ensure the wine bottle has been at a stable temperature for some time before taking a reading. Rapid temperature changes (e.g., moving from a very cold to a warm environment) can cause temporary fluctuations.
 - The thermometer displays in degrees Celsius. Ensure you are interpreting the reading correctly.
- **Physical Damage:**
 - If the thermometer appears physically damaged, especially the heat-sensitive band, its accuracy may be compromised. Contact customer support if the product is within its warranty period.
