Wiha 26193

Wiha 26193 Slotted and Phillips Screwdriver Set Instruction Manual

MODEL: 26193

1. Introduction

This manual provides essential information for the proper use, care, and maintenance of your Wiha 26193 Slotted and Phillips Screwdriver Set. Please read these instructions carefully before using the tools to ensure safe and effective operation and to maximize the lifespan of your precision screwdrivers.

The Wiha 26193 set features high-quality precision screwdrivers designed for delicate tasks, equipped with Soft PicoFinish handles for enhanced control and comfort.

2. Product Overview

The Wiha 26193 set includes eight precision screwdrivers, comprising both slotted and Phillips head types, housed in a durable storage bag. Each screwdriver is crafted with a high alloy CVM steel blade, hardened and hard chromed for durability, and features a Chromtop finish on the tip for a precise fit.

The set includes the following sizes:

- **Slotted:** 1.0mm, 1.5mm, 2.0mm, 2.5mm, 3.5mm
- **Phillips:** #00, #0, #1

3. Setup

Upon receiving your Wiha 26193 Screwdriver Set, carefully remove the tools from their packaging. Inspect each screwdriver for any signs of damage. The set comes with a green canvas pouch designed for convenient storage and organization. Place each screwdriver securely in its designated slot within the pouch when not in use to protect the tips and handles.

4. Operating Instructions

These precision screwdrivers are designed for tasks requiring fine control and accuracy, such as electronics repair, watchmaking, and other delicate applications.

1. **Select the Correct Tip:** Always choose the screwdriver tip that precisely matches the screw head. Using an incorrect size can damage both the screw and the screwdriver tip. Refer to the markings on the handle for tip type and size.
2. **Grip and Control:** The Soft PicoFinish handle is ergonomically designed for comfort and control. Hold the

handle firmly but gently. The rotating cap at the end of the handle allows for precise turning and control with your fingertip while maintaining constant downward pressure.

3. **Apply Pressure:** Apply steady, firm downward pressure to keep the screwdriver tip engaged with the screw head. This prevents cam-out and reduces the risk of stripping the screw.
4. **Turn Smoothly:** Rotate the screwdriver smoothly and consistently. For very small screws, use the rotating cap to apply rotational force with your fingertip, allowing for fine adjustments.

5. Maintenance

Proper maintenance ensures the longevity and performance of your Wiha screwdrivers.

- **Cleaning:** After each use, wipe the blades and handles with a clean, dry cloth to remove any dirt, grease, or debris. For stubborn grime, a mild cleaning solution can be used, followed by thorough drying.
- **Storage:** Always store the screwdrivers in their provided canvas pouch. This protects the precision tips from damage and keeps the set organized. Store in a dry environment to prevent corrosion.
- **Inspection:** Periodically inspect the screwdriver tips for wear, bending, or damage. While Wiha tools are

designed for durability, extreme force or improper use can cause damage. Replace any damaged tools to prevent injury or further damage to fasteners.

- **Blade Care:** The blades are made from high alloy CVM steel and are hard chromed. Avoid using these screwdrivers as prying tools, chisels, or punches, as this can compromise the blade integrity.

6. Troubleshooting

If you encounter issues while using your Wiha screwdrivers, consider the following:

- **Screw Head Stripping:** This often occurs when the wrong size tip is used, insufficient downward pressure is applied, or excessive rotational force is used. Ensure the tip fits snugly into the screw head and apply firm, steady pressure.
- **Screwdriver Tip Damage:** Bent or broken tips usually result from using the screwdriver for tasks it was not designed for (e.g., prying) or from applying excessive torque beyond the tool's capacity. Always use the correct tool for the job.
- **Difficulty Turning Screws:** Ensure the screw is not seized or cross-threaded. For very tight screws, consider using a penetrating lubricant if appropriate for the application, or a larger, more robust screwdriver if the precision tool is being overstressed.

For persistent issues or concerns about tool performance, contact Wiha customer support.

7. Specifications

Feature	Detail
Brand	Wiha
Model Name	26193
Number of Pieces	8
Head Styles	Slotted, Phillips
Head Sizes	Slotted: 1.0mm, 1.5mm, 2.0mm, 2.5mm, 3.5mm; Phillips: #00, #0, #1
Blade Material	High Alloy CVM Steel, hardened, hard chromed
Handle Type	Soft PicoFinish with rotating cap
Item Weight	8.8 ounces
Product Dimensions	1.4 x 7.1 x 9.3 inches (packaged)
Recommended Uses	Repair, precision tasks

8. Warranty and Support

For information regarding warranty coverage, claims, or technical support for your Wiha 26193 Screwdriver Set, please refer to the official Wiha website or contact Wiha customer service directly. Keep your purchase receipt as proof of purchase.
