Seating and Restraints

Adjust the driver's seat for optimal comfort and control. Ensure all occupants are properly secured with seat belts. Review the operation of the seat belt system and any available child restraint systems.

Mirrors

Adjust the rearview mirror and side mirrors to provide the best possible view of the areas around your vehicle.

Operating Your GMC Jimmy

This section covers the essential procedures for starting, driving, and stopping your vehicle safely.

Starting the Engine

1. Ensure the transmission is in PARK (P) or NEUTRAL (N).
2. Insert the key into the ignition and turn it to the START position.
3. Release the key once the engine starts. Do not crank for more than 15 seconds at a time.

Driving

- **Automatic Transmission:** Shift into DRIVE (D) for normal forward motion. Use other gears (e.g., 2, 1) for specific driving conditions like steep grades or towing.
- **Braking:** Apply steady pressure to the brake pedal to slow down or stop. Avoid sudden, hard braking unless in an emergency.
- **Steering:** Maintain a firm grip on the steering wheel. Be aware of road conditions and adjust your steering input accordingly.

Four-Wheel Drive (4WD) Operation

If your Jimmy is equipped with 4WD, understand when and how to engage and disengage it. Typically, 4WD High is for slippery road conditions, and 4WD Low is for severe off-road situations requiring maximum traction and torque. Consult your manual for specific engagement procedures and speed limitations.
