3.1 Components Included

- Weatherproof Cover
- Base
- Mounting Screws
- Two Adapter Plates

3.2 Installation Steps

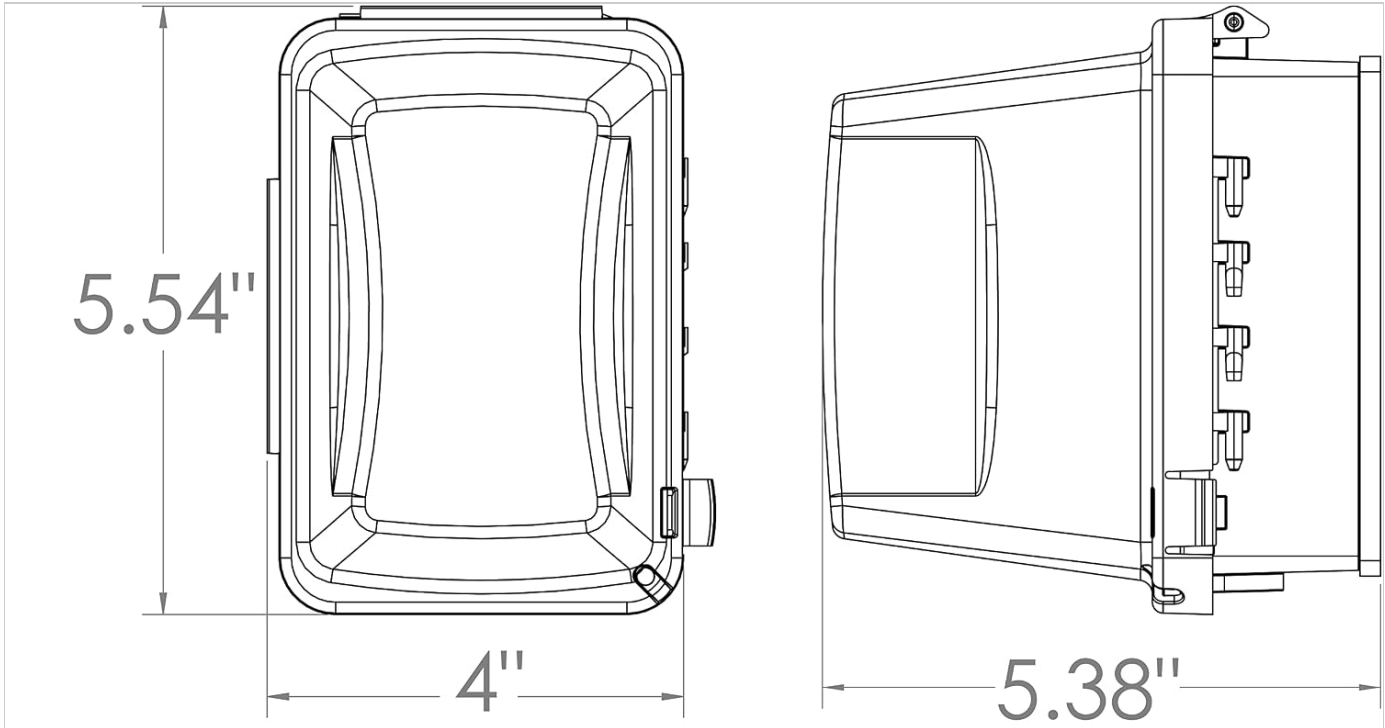

1. **Prepare the Base:** If needed, snap the appropriate adapter plates into the back of the base (the side with the attached gasket).
2. **Remove Cord Port:** For vertical installation, use pliers to remove the single cord port located on the bottom side of the base. For horizontal installation, remove the cord ports on the wider side.
3. **Turn Off Power:** Ensure the power to the electrical outlet is OFF at the circuit breaker.
4. **Loosen Device Screws:** Back out the device mounting screws on your existing outlet by about half an inch.
5. **Apply Sealant (Optional):** If installing on a rough or uneven surface, apply a quarter-inch bead of silicone caulk between the base and the wall surface to ensure a watertight seal.
6. **Mount the Base:** Align the keyholes on the base with the loosened screws on the outlet. Slide the base over the screws and then tighten the screws until the gasket is compressed and the base is snug against the wall.
7. **Attach the Cover:** To attach the clear cover, angle it between 60 and 80 degrees relative to the base. Align the hinge pins on the base with the corresponding holes on the cover, then push sideways to snap the cover securely into place.

- Ensure the electrical cord is properly routed through the designated opening and not obstructing the cover's closure.
- Verify that the cover's hinge pins are correctly seated in the base's holes.

- Confirm that the mounting screws are tightened sufficiently to compress the gasket against the wall surface.

If issues persist, consult a qualified electrician.
