MAINTENANCE AND CLEANING

Proper care will extend the life of your electric skillet.

1. **Cool Down:** Always allow the skillet to cool completely before cleaning.
2. **Remove Probe:** Detach the temperature control probe from the skillet base. The probe should never be immersed in water. Wipe it clean with a damp cloth if necessary.
3. **Skillet Base:** The stainless steel skillet base can be hand washed with warm, soapy water. For stubborn food residue, allow the skillet to soak for a short period. Avoid abrasive cleaners or metal scouring pads that could scratch the surface. A damp paper towel can also be used for light cleaning.
4. **Lid:** The tempered glass lid can be washed in warm, soapy water or placed in a dishwasher.
5. **Drying and Storage:** Ensure all parts are thoroughly dry before reassembling or storing. Store the skillet and probe in a dry place.

Caution: Do not immerse the skillet base in standing water if there are vents on the underside, as this could damage electrical components. Use a sprayer to rinse carefully.
