## Unpacking and Initial Inspection

1. Carefully remove the hedge trimmer and all packaging materials from the box.
2. Check for any signs of damage during transit. If damage is present, do not use the tool and contact your retailer.
3. Ensure all components are present as listed in the packaging contents (e.g., main unit, blade cover).

## Power Connection

- The Flymo EasiCut 450 operates on a standard 230V AC power supply.
- Connect the 12-meter main cable to a suitable outdoor-rated extension cord if necessary, ensuring the extension cord is rated for outdoor use and has sufficient current capacity.
- Always use a Residual Current Device (RCD) when operating electrical garden tools outdoors for added safety.

## 3. OPERATING INSTRUCTIONS

---

### Starting and Stopping

- To start the hedge trimmer, ensure both safety switches (one on the front handle, one on the rear handle) are depressed simultaneously.
- Release either switch to stop the trimmer. The blades will cease movement quickly.

### Cutting Techniques

- **Horizontal Cutting:** For the top of hedges, hold the trimmer level and sweep it across the hedge in smooth, even strokes.
- **Vertical Cutting:** For the sides of hedges, hold the trimmer vertically and move it upwards or downwards, maintaining a slight angle for a clean finish.
- Avoid cutting branches thicker than the recommended capacity (typically around 15-20mm, refer to specifications for exact details). For thicker branches, use appropriate pruning tools.
- Work systematically, moving from one end of the hedge to the other, ensuring consistent results.

### Cable Management

The 12-meter cable provides extended reach. Always manage the cable carefully to prevent accidental cutting or tripping hazards. Keep the cable behind you and away from the cutting blades as you work.

## 4. MAINTENANCE

---

Regular maintenance ensures the longevity and optimal performance of your hedge trimmer. Always disconnect the power supply before performing any maintenance.

### Blade Cleaning and Lubrication

- After each use, clean the blades thoroughly to remove sap, leaves, and debris. Use a stiff brush or cloth.

- Apply a light coat of machine oil or specialized blade lubricant to the blades to prevent rust and ensure smooth operation.
- Inspect the blades for any damage or dullness. Sharpening should be done by a qualified service technician if required.

## General Cleaning and Storage

- Wipe down the main body of the trimmer with a damp cloth. Do not use harsh chemicals or abrasive cleaners.
- Ensure the trimmer is completely dry before storing.
- Store the hedge trimmer with the blade cover in place, in a dry, well-ventilated area, away from direct sunlight and extreme temperatures. Keep it out of reach of children.

## 5. TROUBLESHOOTING

Before contacting customer support, please refer to the following common issues and their potential solutions:

Problem	Possible Cause	Solution
Trimmer does not start.	No power supply. Safety switches not fully depressed. Overload protection activated.	Check power outlet and cable connection. Ensure both safety switches are pressed simultaneously. Disconnect from power, wait a few minutes, then try again. Reduce load.
Blades not cutting effectively.	Blades are dull or dirty. Cutting material is too thick.	Clean and lubricate blades. Consider professional sharpening. Do not attempt to cut branches exceeding the trimmer's capacity. Use pruning shears for thicker branches.
Excessive vibration or noise.	Loose components. Damaged blades.	Stop the trimmer and inspect for loose parts. Tighten if possible. Inspect blades for bends or cracks. If damaged, seek professional service.

If the problem persists after attempting these solutions, please contact Flymo customer support or a qualified service center.
