## Kit Cat Klock BC01

# Kit Cat Klock Gentlemen The Original (Classic Black) Instruction Manual

Model: BC01

## INTRODUCTION

Welcome to the timeless charm of your new Kit Cat Klock. This classic black wall clock, featuring its iconic rolling eyes and wagging tail, has been a beloved American icon since 1932. This manual provides essential information for setting up, operating, maintaining, and troubleshooting your clock to ensure years of enjoyment.

## SETUP

### 1. Battery Installation

Your Kit Cat Klock requires two (2) C batteries (not included). To install the batteries:

1. Carefully remove the back cover of the clock.
2. Insert two C batteries into the designated compartments, ensuring correct polarity (+/-).
3. Replace the back cover, ensuring it snaps securely into place.

*Rear view of the Kit Cat Klock, illustrating the battery compartment for two C batteries.*

## 2. Mounting the Clock

The Kit Cat Klock is designed for wall mounting. A screw is recommended for stability. Ensure the mounting surface is secure.

1. Choose a suitable location on your wall.
2. Install a screw into the wall, leaving a small portion exposed for the clock's hanging slot.
3. Hang the clock securely on the screw.
4. Adjust the vertical angle slightly if needed to ensure smooth tail movement.

## 3. Setting the Time

To set the time on your Kit Cat Klock, **only move the minute hand**. Moving the hour hand directly may damage the clock mechanism.

## OPERATING INSTRUCTIONS

Once batteries are installed and the time is set, your Kit Cat Klock will begin its characteristic operation:

- **Rolling Eyes:** The cat's eyes will roll from side to side in a synchronized motion.
- **Wagging Tail:** The tail will wag back and forth, adding to the clock's animated charm.

The clock is battery-powered, offering flexibility in placement without the need for electrical outlets or cords.

## MAINTENANCE

### 1. Battery Replacement

Replace the two C batteries when the clock's movement (eyes and tail) slows down or stops. It is recommended to replace both batteries at the same time for optimal performance.

### 2. Cleaning

To clean your Kit Cat Klock, gently wipe the surface with a soft, dry cloth. Avoid using harsh chemicals or abrasive cleaners, as these may damage the finish.

### 3. Lubrication (If Needed)

If the eyes or tail movement becomes stiff or stops, a small amount of lubricant, such as castor oil applied with a pointed cotton swab, can be used on the pivot points of the eyes and the bracket where the tail connects. This can help restore smooth operation.

## TROUBLESHOOTING

If your Kit Cat Klock is not functioning as expected, consider the following:

- **No Movement (Eyes/Tail):** Ensure batteries are fresh and correctly installed. Check for any obstructions in the movement mechanism.
- **Intermittent Movement:** This can sometimes be caused by electrical interference from nearby appliances or wiring. Try relocating the clock to a different wall or room.
- **Stiff Movement:** Apply a small amount of lubricant (e.g., castor oil) to the pivot points of the eyes and the tail bracket as described in the Maintenance section.
- **Incorrect Time:** Ensure you only adjust the minute hand when setting the time.
