4. OPERATION

Adjusting Cutting Height

The cutting height can be adjusted to suit your lawn's needs, ranging from 0.5 inches to 2.5 inches.

1. Locate the height adjustment levers or knobs on the side of the mower, near the wheels.
2. Adjust both sides to the desired height setting. Ensure both sides are set equally to maintain an even cut.
3. A higher setting is recommended for taller grass or for the first cut of the season.

Mowing Your Lawn

1. **Prepare the Area:** Before mowing, remove any obstacles such as toys, stones, or branches from the lawn.
2. **Pushing Technique:** Push the mower at a steady, comfortable pace. Overlapping each pass slightly will ensure an even cut.
3. **Grass Height:** For best results, avoid cutting more than one-third of the grass blade length at a time. If grass is very tall, consider raising the cutting height for the first pass and then lowering it for a second pass.
4. **Direction:** Vary your mowing pattern each time to prevent matting and promote healthier grass growth.

5. MAINTENANCE

Regular maintenance will extend the life and performance of your reel mower.

Cleaning

- After each use, clean grass clippings from the blades and undercarriage. A stiff brush or hose can be used.
- Ensure the mower is dry before storing to prevent rust.

Blade Care

- The heat-treated alloy steel blades are designed for durability, but regular inspection is recommended.
- If blades become dull, they can be sharpened by a professional or with a reel mower sharpening kit.
- Apply a light coat of lubricant (e.g., WD-40) to the blades and moving parts periodically to prevent rust and ensure smooth operation.

This image provides a top-down perspective of the mower's 5-blade ball bearing reel system, made from heat-treated tempered alloy steel. It illustrates the cutting mechanism responsible for a clean cut.

6. TROUBLESHOOTING

Here are solutions to common issues you might encounter:

- **Mower not cutting effectively:**
 - Check if the cutting height is set too low for the current grass height. Raise the cutting height.
 - Inspect blades for dullness or damage. Sharpen or replace as needed.
 - Ensure the cutting bar is properly adjusted against the reel blades.
- **Mower is difficult to push:**
 - Grass may be too tall or thick. Raise the cutting height or make multiple passes.
 - Check for debris (twigs, rocks) caught in the blades or wheels. Clear any obstructions.
 - Lubricate moving parts if they feel stiff.
- **Uneven cut:**
 - Ensure both sides of the cutting height adjustment are set to the same level.
 - Check for bent or damaged blades.
