WHAT'S IN THE BOX

- White-Rodgers 1E78-140 Thermostat Wall Digital Heat Only Unit
- 3 AAA batteries (included)

SETUP AND INSTALLATION

Important: Before beginning installation, ensure the power to your heating system is turned off at the main fuse or circuit

breaker panel. Improper wiring can damage the thermostat and heating system.

1. **Power Disconnection:** Turn off all power to the heating system at the main service panel.
2. **Remove Old Thermostat:** Carefully remove the cover of your old thermostat. Note the wire connections. Take a picture for reference if needed.
3. **Label Wires:** Label each wire with the terminal designation from your old thermostat (e.g., R, W). This thermostat typically uses two wires for heat-only systems.
4. **Remove Old Base:** Unscrew and remove the old thermostat's mounting base from the wall.
5. **Mount New Base:** Position the new Emerson 1E78-140 thermostat base on the wall. Use the provided screws and anchors to secure it.
6. **Wire Connections:** Connect the labeled wires to the corresponding terminals on the new thermostat base. For typical heat-only systems, connect the "R" wire to the R terminal and the "W" wire to the W terminal. Ensure connections are secure.
7. **Battery Installation:** Insert the 3 AAA batteries into the battery compartment, observing correct polarity.
8. **Attach Thermostat Body:** Carefully align the thermostat body with the mounted base and snap it into place.
9. **Restore Power:** Turn the power back on at the main service panel.
10. **Initial Test:** Set the thermostat to a temperature above the current room temperature to ensure the heating system activates.

For detailed wiring diagrams and specific system configurations, please refer to the official [Installation Manual \(PDF\)](#).

OPERATING INSTRUCTIONS

Understanding the Display:

The digital display shows the current room temperature and the set temperature. A flame icon typically indicates when the heating system is actively calling for heat.

Setting the Temperature:

- Use the **Up** and **Down** arrow buttons located on the front of the thermostat to adjust the desired temperature.

- The set temperature will flash as you adjust it and then return to displaying the current room temperature after a few seconds.

Backlight Function:

The thermostat features a backlight for improved visibility in low-light conditions. The backlight can be activated by pressing any button. Some models may require an initial activation step as described in the full installation manual.

System Switch:

Locate the system switch (usually labeled OFF/HEAT) on the thermostat. Set it to **HEAT** for normal operation or **OFF** to disable the heating system.

MAINTENANCE

Battery Replacement:

The thermostat is powered by 3 AAA batteries. When the battery icon appears on the display, it indicates that the batteries are low and need to be replaced. Replace all three batteries simultaneously with new alkaline AAA batteries to ensure optimal performance.

1. Gently pull the thermostat body away from its wall-mounted base.
2. Remove the old AAA batteries.
3. Insert new AAA alkaline batteries, ensuring correct polarity (+/-).
4. Snap the thermostat body back onto its base.

Cleaning:

To clean the thermostat, gently wipe the exterior with a soft, damp cloth. Do not use abrasive cleaners or solvents, as these can damage the finish or internal components.

TROUBLESHOOTING

Problem	Possible Cause	Solution
No display or blank screen.	Dead or improperly installed batteries.	Replace batteries with new AAA alkaline batteries, ensuring correct polarity.
Heating system does not turn on.	System switch set to OFF. Temperature set below room temperature. Blown fuse or tripped circuit breaker for heating system. Loose wiring connections.	Set system switch to HEAT. Increase set temperature above current room temperature. Check and reset circuit breaker or replace fuse. Verify all wiring connections are secure.

Problem	Possible Cause	Solution
Inaccurate temperature reading.	Thermostat located near a heat source (e.g., direct sunlight, appliance) or draft.	Ensure thermostat is not exposed to direct heat sources or drafts. Relocate if necessary.
Backlight not working.	Backlight feature may need initial activation or batteries are low.	Refer to the full installation manual for backlight activation steps. Replace batteries if low.

If problems persist after attempting these solutions, consult a qualified HVAC technician.
