The E-P1 utilizes a 3-inch HyperCrystal LCD for composing and reviewing images. The Live Control function displays icons on the LCD for easy access to settings.

- **Focusing:** The camera features fast Imager Autofocus in Live View. For manual focusing, use the MF Assist Function and Magnification Display, which allows zooming up to 10x on the LCD for precise focus.
- **Shutter Release:** Press the shutter button halfway to focus, then press fully to capture the image.
- **Scene Modes:** The camera offers 19 automatic scene modes, including Night-Scene, Portrait, and Landscape. *Intelligent Auto Mode* automatically identifies the scene type and adjusts settings. *ePortrait Mode* smooths facial features in-camera.
- **Exposure:** *Shadow Adjustment Technology* helps maintain detail in both highlight and shadow areas. The

camera supports 18x18 ESP metering, center-weighted, and spot metering modes.

- **Image Stabilization:** The E-P1 features in-body image stabilization, compensating for camera shake across three modes and up to four EV steps.

3.3 Recording Videos

The E-P1 records HD video with high-quality 24-bit/96kHz Linear PCM stereo audio using built-in microphones. Videos can be recorded in MJPEG format at 1280 x 720 (30 fps) or 640 x 480 (30 fps).

3.4 Creative Features

The camera includes several in-camera creative options:

- **Art Filters:** Apply filters like Pop Art, Soft Focus, Pale & Light Color, Light Tone, Grainy Film, or Pin Hole to both still images and HD videos. Effects are visible on the LCD in real-time.
- **Multiple Exposures:** Combine two shots into one image. This can be done in real-time or by combining separately captured images later.
- **Multi-Aspect Shooting:** Choose from various aspect ratios (4:3, 16:9, 3:2, 6:6) to frame your images.

3.5 Reviewing and Sharing

In playback mode, you can create multimedia slideshows by mixing stills and videos, adding one of five built-in background music options. Connect the camera to an HD television via an HDMI cable to view your content.

4. MAINTENANCE

4.1 Dust Reduction System

The E-P1 features an Olympus Dust Reduction System with a Supersonic Wave Filter. This patented ultrasonic technology vibrates to remove dust and particles from the image sensor each time the camera is powered on, helping to ensure spot-free photos.

4.2 General Cleaning

- Use a soft, lint-free cloth to clean the camera body.
- For the lens and LCD screen, use a specialized lens cleaning cloth and solution.
- Avoid using harsh chemicals or abrasive materials.

5. TROUBLESHOOTING

If you encounter issues with your camera, consider the following general troubleshooting steps:

- **Camera does not power on:** Ensure the battery is fully charged and correctly inserted.
- **Cannot take photos:** Check if a memory card is inserted and has sufficient free space. Ensure the lens is properly attached.
- **Images are blurry:** Verify that the lens is clean. Check focus settings and ensure image stabilization is active if shooting in low light or with a telephoto lens.
- **Dust spots on images:** The camera's Dust Reduction System activates upon startup. If spots persist, consult a service center.

For more specific issues, refer to the detailed troubleshooting section in the OLYMPUS Master CD-ROM or the Olympus support website.
