

Hayward SP1091LX

Hayward SP1091LX Dyna-Skim Above-Ground Pool Skimmer Instruction Manual

INTRODUCTION

This manual provides comprehensive instructions for the installation, operation, and maintenance of your Hayward SP1091LX Dyna-Skim Above-Ground Pool Skimmer. Please read all instructions carefully before beginning installation or operation to ensure safe and efficient use of the product.

SAFETY INFORMATION

WARNING: This product can expose you to chemicals including Styrene, which is known to the State of California to cause cancer. For more information go to www.P65Warnings.ca.gov.

Ensure the pool skimmer is securely installed and regularly cleaned to prevent clogging. Keep away from children during operation. Always disconnect power to the pump before performing any maintenance or installation procedures.

PRODUCT OVERVIEW

The Hayward SP1091LX Dyna-Skim is designed for efficient surface skimming in above-ground pools. Its robust construction and thoughtful design ensure effective debris removal and long-term performance.

Key Features:

- Large debris collection basket for extended cleaning cycles.
- Heavy-duty UV resistant ABS construction for durability.
- Convenient top and front basket access for easy maintenance.
- Snap-in and removable weir for optimal skimming action.
- Compatibility with wide top seat pools.

Components:

The skimmer assembly includes the main skimmer body, a debris basket, a weir, gaskets, mounting hardware, and various plumbing connections. Refer to the image below for a visual representation of the components.

Image Description: An exploded view of the Hayward SP1091LX Dyna-Skim Above-Ground Pool Skimmer components. It shows the main skimmer housing, a white plastic debris basket, a weir flap, various gaskets, screws, and plumbing adapters. This image illustrates all parts included in the skimmer kit for installation.

SETUP AND INSTALLATION

Proper installation is crucial for the skimmer's performance and to prevent leaks. It is recommended to perform installation on an empty or partially drained pool to ensure accuracy and safety. If your pool is already filled, exercise extreme caution when cutting the liner.

1. **Choose Location:** Select a location on the pool wall, typically opposite the return jet, for optimal water circulation and skimming.
2. **Prepare Pool Wall:** If installing on an existing pool, drain the water level below the intended skimmer opening.
3. **Mark and Cut Opening:** Position the skimmer body or template against the pool wall from the outside. Mark the outline of the skimmer opening and screw holes. Carefully cut the pool liner along the marked opening. *Exercise extreme caution to avoid over-cutting.*
4. **Install Gaskets:** Place one gasket on the inside of the pool liner and the other on the outside, aligning them with the cut opening and screw holes.
5. **Mount Skimmer Body:** Insert the skimmer body from the outside of the pool wall, aligning it with the gaskets and liner opening. Secure the inner faceplate from the inside of the pool using the provided screws. Tighten screws evenly to create a watertight seal.
6. **Connect Plumbing:** Attach the appropriate plumbing adapter to the bottom of the skimmer body. Connect your pool pump's suction hose to this adapter. Ensure all connections are tight and sealed to prevent air leaks.
7. **Install Weir and Basket:** Insert the debris basket into the skimmer body, followed by the snap-in weir.
8. **Fill Pool and Test:** Slowly fill the pool to the recommended operating level. Carefully inspect for any leaks around the skimmer assembly.

Note: For detailed visual guidance, search for "Hayward SP1091LX installation" videos online. Always refer to local plumbing codes and safety regulations.

OPERATING INSTRUCTIONS

Once installed, the Hayward Dyna-Skim operates automatically with your pool pump to remove surface debris.

1. **Ensure Proper Water Level:** Maintain the pool water level at approximately one-half to two-thirds up the skimmer opening for optimal skimming action.
2. **Activate Pump:** Turn on your pool pump. Water will be drawn into the skimmer, pulling floating debris into the basket.
3. **Monitor Skimming:** Observe the skimmer's performance. The weir flap should move freely, allowing water and debris to enter while preventing debris from floating back into the pool when the pump is off.

MAINTENANCE

Regular maintenance ensures the longevity and efficiency of your skimmer.

- **Empty Debris Basket:** Check the skimmer basket daily or as needed, especially after heavy winds or rain. Remove the skimmer lid and lift out the basket. Dispose of collected debris and rinse the basket clean.
- **Inspect Weir:** Ensure the weir flap moves freely and is not obstructed by debris.
- **Check for Cracks/Damage:** Periodically inspect the skimmer body and faceplate for any signs of cracks or damage, which could lead to leaks.
- **Clean Skimmer Body:** If necessary, clean the inside of the skimmer body to prevent algae buildup.

TROUBLESHOOTING

Problem	Possible Cause	Solution
Poor Skimming Action	Clogged basket; low water level; obstructed weir.	Empty debris basket; adjust water level; clear weir obstruction.
Water Leaks Around Skimmer	Improperly seated gaskets; loose screws; damaged liner or skimmer body.	Check gasket alignment and condition; tighten screws evenly; inspect liner and skimmer for damage and repair/replace as needed.
Pump Losing Prime	Air leak in suction line or skimmer connection.	Inspect all connections from skimmer to pump for tightness; check skimmer gaskets for proper seal.

SPECIFICATIONS

- **Model Number:** SP1091LX
- **Brand:** Hayward
- **Product Dimensions:** 12.75 x 10.25 x 8.25 inches
- **Item Weight:** 4.9 pounds
- **Construction Material:** Heavy-duty UV resistant ABS
- **Compatibility:** Designed for above-ground pools, including wide top seat pools.
