JURA Claris White Filter Cartridge Instruction Manual

Model: 68739

INTRODUCTION

The JURA CLARIS White filter cartridge is designed to ensure freshly filtered water for optimal coffee results in JURA automatic coffee machines. This filter is placed directly into the water tank, eliminating the need for additional accessories or space. It utilizes a professional up-flow principle to filter the precise amount of water immediately before use.

CLARIS filters contain a natural ion exchanger and active carbon, which effectively remove substances like chlorine that can impair flavor and aroma, thereby achieving maximum water quality. The filtered water is optimally prepared for coffee making with a neutral pH, contributing to fresh water, fresh beans, and fresh coffee.

Regular use of an original JURA CLARIS filter cartridge extends the service life of your JURA coffee machine by preventing limescale buildup.

PRODUCT OVERVIEW

Image: Three JURA Claris White filter cartridges, indicating a multi-pack. These are laboratory tested original JURA products, designed for optimal coffee enjoyment and machine protection.

SETUP AND INSTALLATION

1. Ensure your JURA coffee machine is turned off and unplugged.
2. Remove the water tank from your coffee machine.
3. Empty any remaining water from the tank.
4. Insert the JURA CLARIS White filter cartridge into the designated filter holder within the water tank. The CLARIS White filter is compatible with all JURA coffee machines featuring a WHITE filter holder and a ROUND flange in the water tank.
5. Press the filter firmly until it clicks into place.
6. Fill the water tank with fresh, cold tap water.
7. Reinsert the water tank into your coffee machine.
8. Follow your coffee machine's specific instructions to activate the new filter and flush the system. This typically involves running a certain amount of water through the machine without coffee.

OPERATING PRINCIPLE

The JURA CLARIS White filter operates on an advanced up-flow principle, ensuring that only the exact amount of water required for your coffee is freshly filtered just before brewing. This method maximizes the effectiveness of the filtration process.

Optimale Filterung – voller Kaffeegeschmack

Dank dem Aufstromprinzip wird nur die Wassermenge frisch gefiltert, die für die Zubereitung benötigt wird.

Image: A cross-section diagram of the JURA Claris White filter, illustrating the optimal filtration process and water flow path. This ensures full coffee flavor by filtering water just before use.

The filter's innovative formula effectively removes harmful substances that can affect taste and aroma, such as chlorine, while retaining essential minerals and fluorides that contribute to the water's quality and taste profile. This results in water with a neutral pH, ideal for brewing exceptional coffee.

Innovative Formel

Schädliche Stoffe werden herausgefiltert, während wichtige Fluoride und Mineralien im Wasser bleiben.

MAINTENANCE AND REPLACEMENT

To maintain optimal water quality and protect your coffee machine, the JURA CLARIS White filter cartridge should be replaced regularly. The filter has a capacity of up to 50 liters of water or a maximum of 2 months, whichever comes first.

The new protection formula in the CLARIS White filter eliminates the need for descaling your JURA automatic coffee machine, simplifying maintenance and extending the machine's lifespan.
